NEET Previous Year Practice 2023 (2023)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of accuracy? (variation 77)

2. When working with Machine Learning, why would a developer use features?

3. What is the most accurate beginner-level explanation of accuracy? (variation 97)

4. What is the most accurate beginner-level explanation of accuracy?

5. Which option is a correct use case for regression in Machine Learning?

6. Which statement best describes training data in Machine Learning? (variation 80)

7. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

8. What is the most accurate beginner-level explanation of accuracy? (variation 357)

9. Which option is a correct use case for regression in Machine Learning? (variation 353)

10. Which statement best describes overfitting in Machine Learning? (variation 75)

11. What is the most accurate beginner-level explanation of labels? (variation 72)

12. Which statement best describes overfitting in Machine Learning? (variation 355)

13. Which option is a correct use case for regression in Machine Learning? (variation 83)

14. When working with Machine Learning, why would a developer use features? (variation 91)

15. What is the most accurate beginner-level explanation of labels? (variation 92)

16. When working with Machine Learning, why would a developer use train-test split? (variation 356)

17. Which statement best describes overfitting in Machine Learning? (variation 95)

18. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

19. What is the most accurate beginner-level explanation of accuracy? (variation 87)

20. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

21. A student says 'classification' is not relevant to real projects. What is the best correction?

22. When working with Machine Learning, why would a developer use features? (variation 351)

23. What is the most accurate beginner-level explanation of labels? (variation 82)

24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

25. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

26. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

27. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

28. Which statement best describes overfitting in Machine Learning? (variation 105)

29. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

30. Which option is a correct use case for regression in Machine Learning? (variation 73)

31. Which option is a correct use case for regression in Machine Learning? (variation 93)

32. What is the most accurate beginner-level explanation of labels?

33. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

34. What is the most accurate beginner-level explanation of labels? (variation 102)

35. When working with Machine Learning, why would a developer use train-test split? (variation 96)

36. Which statement best describes training data in Machine Learning? (variation 100)

37. Which statement best describes training data in Machine Learning? (variation 90)

38. Which statement best describes training data in Machine Learning? (variation 70)

39. Which option is a correct use case for regression in Machine Learning? (variation 103)

40. When working with Machine Learning, why would a developer use train-test split?

41. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

42. Which option is a correct use case for confusion matrix in Machine Learning?

43. Which statement best describes training data in Machine Learning?

44. When working with Machine Learning, why would a developer use train-test split? (variation 76)

45. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

46. Which statement best describes overfitting in Machine Learning?

47. When working with Machine Learning, why would a developer use features? (variation 81)

48. When working with Machine Learning, why would a developer use features? (variation 71)

49. When working with Machine Learning, why would a developer use train-test split? (variation 106)

50. When working with Machine Learning, why would a developer use train-test split? (variation 86)

51. What is the most accurate beginner-level explanation of labels? (variation 352)

52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

53. When working with Machine Learning, why would a developer use features? (variation 101)

54. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

55. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

57. Which statement best describes training data in Machine Learning? (variation 350)

58. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

59. What is the most accurate beginner-level explanation of accuracy? (variation 107)

60. Which statement best describes overfitting in Machine Learning? (variation 85)
