University Exams Previous Year Practice 2022 (2022)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 356)

2. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

3. What is the most accurate beginner-level explanation of accuracy? (variation 87)

4. Which option is a correct use case for regression in Machine Learning? (variation 353)

5. A student says 'classification' is not relevant to real projects. What is the best correction?

6. What is the most accurate beginner-level explanation of labels?

7. Which option is a correct use case for confusion matrix in Machine Learning?

8. What is the most accurate beginner-level explanation of accuracy? (variation 107)

9. Which option is a correct use case for regression in Machine Learning? (variation 73)

10. When working with Machine Learning, why would a developer use features? (variation 81)

11. When working with Machine Learning, why would a developer use features? (variation 91)

12. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

13. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

14. Which option is a correct use case for regression in Machine Learning? (variation 83)

15. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

16. Which statement best describes overfitting in Machine Learning? (variation 85)

17. When working with Machine Learning, why would a developer use train-test split? (variation 96)

18. When working with Machine Learning, why would a developer use train-test split?

19. What is the most accurate beginner-level explanation of labels? (variation 92)

20. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

21. Which statement best describes training data in Machine Learning? (variation 350)

22. Which statement best describes overfitting in Machine Learning?

23. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

24. Which option is a correct use case for regression in Machine Learning?

25. Which statement best describes training data in Machine Learning? (variation 70)

26. What is the most accurate beginner-level explanation of accuracy? (variation 77)

27. Which statement best describes overfitting in Machine Learning? (variation 95)

28. When working with Machine Learning, why would a developer use train-test split? (variation 76)

29. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

30. When working with Machine Learning, why would a developer use features? (variation 101)

31. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

32. Which option is a correct use case for regression in Machine Learning? (variation 103)

33. What is the most accurate beginner-level explanation of accuracy?

34. Which statement best describes training data in Machine Learning?

35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

36. What is the most accurate beginner-level explanation of labels? (variation 102)

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

38. What is the most accurate beginner-level explanation of labels? (variation 82)

39. When working with Machine Learning, why would a developer use train-test split? (variation 106)

40. What is the most accurate beginner-level explanation of accuracy? (variation 357)

41. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

42. Which statement best describes overfitting in Machine Learning? (variation 75)

43. When working with Machine Learning, why would a developer use features? (variation 71)

44. Which statement best describes training data in Machine Learning? (variation 90)

45. When working with Machine Learning, why would a developer use features?

46. Which option is a correct use case for regression in Machine Learning? (variation 93)

47. What is the most accurate beginner-level explanation of labels? (variation 352)

48. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

49. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

50. Which statement best describes training data in Machine Learning? (variation 100)

51. What is the most accurate beginner-level explanation of accuracy? (variation 97)

52. Which statement best describes overfitting in Machine Learning? (variation 105)

53. When working with Machine Learning, why would a developer use features? (variation 351)

54. When working with Machine Learning, why would a developer use train-test split? (variation 86)

55. Which statement best describes training data in Machine Learning? (variation 80)

56. What is the most accurate beginner-level explanation of labels? (variation 72)

57. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

58. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

59. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

60. Which statement best describes overfitting in Machine Learning? (variation 355)
