NEET Previous Year Practice 2021 (2021)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning? (variation 95)

2. Which option is a correct use case for regression in Machine Learning?

3. Which statement best describes training data in Machine Learning? (variation 90)

4. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

5. Which option is a correct use case for regression in Machine Learning? (variation 73)

6. What is the most accurate beginner-level explanation of accuracy?

7. Which statement best describes training data in Machine Learning? (variation 80)

8. When working with Machine Learning, why would a developer use train-test split? (variation 356)

9. What is the most accurate beginner-level explanation of accuracy? (variation 107)

10. When working with Machine Learning, why would a developer use features? (variation 71)

11. When working with Machine Learning, why would a developer use train-test split? (variation 76)

12. Which statement best describes overfitting in Machine Learning? (variation 355)

13. When working with Machine Learning, why would a developer use train-test split? (variation 96)

14. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

15. Which option is a correct use case for regression in Machine Learning? (variation 83)

16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

17. What is the most accurate beginner-level explanation of labels? (variation 92)

18. Which statement best describes training data in Machine Learning? (variation 100)

19. Which statement best describes overfitting in Machine Learning? (variation 85)

20. What is the most accurate beginner-level explanation of accuracy? (variation 357)

21. A student says 'classification' is not relevant to real projects. What is the best correction?

22. When working with Machine Learning, why would a developer use train-test split?

23. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

24. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

25. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

26. Which statement best describes training data in Machine Learning? (variation 350)

27. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

28. Which option is a correct use case for confusion matrix in Machine Learning?

29. When working with Machine Learning, why would a developer use features? (variation 91)

30. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

31. Which statement best describes overfitting in Machine Learning?

32. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

33. When working with Machine Learning, why would a developer use features? (variation 81)

34. What is the most accurate beginner-level explanation of labels? (variation 82)

35. When working with Machine Learning, why would a developer use train-test split? (variation 106)

36. Which statement best describes overfitting in Machine Learning? (variation 75)

37. What is the most accurate beginner-level explanation of labels? (variation 102)

38. What is the most accurate beginner-level explanation of labels? (variation 72)

39. What is the most accurate beginner-level explanation of accuracy? (variation 77)

40. Which statement best describes overfitting in Machine Learning? (variation 105)

41. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

42. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

43. What is the most accurate beginner-level explanation of accuracy? (variation 87)

44. Which statement best describes training data in Machine Learning?

45. When working with Machine Learning, why would a developer use features? (variation 351)

46. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

47. When working with Machine Learning, why would a developer use features? (variation 101)

48. When working with Machine Learning, why would a developer use features?

49. Which option is a correct use case for regression in Machine Learning? (variation 103)

50. What is the most accurate beginner-level explanation of labels? (variation 352)

51. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

52. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

53. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

54. Which statement best describes training data in Machine Learning? (variation 70)

55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

56. Which option is a correct use case for regression in Machine Learning? (variation 93)

57. What is the most accurate beginner-level explanation of labels?

58. What is the most accurate beginner-level explanation of accuracy? (variation 97)

59. Which option is a correct use case for regression in Machine Learning? (variation 353)

60. When working with Machine Learning, why would a developer use train-test split? (variation 86)
