UPSC Previous Year Practice 2018 (2018)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

2. Which statement best describes overfitting in Machine Learning?

3. When working with Machine Learning, why would a developer use train-test split? (variation 106)

4. A student says 'classification' is not relevant to real projects. What is the best correction?

5. What is the most accurate beginner-level explanation of labels? (variation 72)

6. Which statement best describes training data in Machine Learning? (variation 100)

7. Which statement best describes training data in Machine Learning?

8. Which option is a correct use case for regression in Machine Learning? (variation 103)

9. Which option is a correct use case for regression in Machine Learning? (variation 73)

10. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

11. When working with Machine Learning, why would a developer use features? (variation 101)

12. Which statement best describes training data in Machine Learning? (variation 350)

13. When working with Machine Learning, why would a developer use train-test split? (variation 76)

14. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

15. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

16. Which option is a correct use case for regression in Machine Learning? (variation 353)

17. When working with Machine Learning, why would a developer use train-test split? (variation 356)

18. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

19. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

20. When working with Machine Learning, why would a developer use features? (variation 71)

21. Which option is a correct use case for regression in Machine Learning? (variation 83)

22. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

23. Which option is a correct use case for regression in Machine Learning? (variation 93)

24. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

25. Which option is a correct use case for confusion matrix in Machine Learning?

26. What is the most accurate beginner-level explanation of labels? (variation 82)

27. What is the most accurate beginner-level explanation of accuracy? (variation 77)

28. When working with Machine Learning, why would a developer use train-test split? (variation 86)

29. What is the most accurate beginner-level explanation of accuracy? (variation 97)

30. What is the most accurate beginner-level explanation of accuracy? (variation 357)

31. Which statement best describes overfitting in Machine Learning? (variation 105)

32. What is the most accurate beginner-level explanation of labels? (variation 102)

33. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

34. Which statement best describes training data in Machine Learning? (variation 70)

35. When working with Machine Learning, why would a developer use features? (variation 81)

36. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

37. Which statement best describes overfitting in Machine Learning? (variation 85)

38. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

40. What is the most accurate beginner-level explanation of labels? (variation 352)

41. What is the most accurate beginner-level explanation of labels?

42. When working with Machine Learning, why would a developer use train-test split? (variation 96)

43. Which statement best describes overfitting in Machine Learning? (variation 355)

44. What is the most accurate beginner-level explanation of accuracy? (variation 107)

45. Which statement best describes overfitting in Machine Learning? (variation 95)

46. When working with Machine Learning, why would a developer use features?

47. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

48. Which statement best describes training data in Machine Learning? (variation 80)

49. What is the most accurate beginner-level explanation of accuracy?

50. Which statement best describes overfitting in Machine Learning? (variation 75)

51. What is the most accurate beginner-level explanation of accuracy? (variation 87)

52. What is the most accurate beginner-level explanation of labels? (variation 92)

53. When working with Machine Learning, why would a developer use train-test split?

54. Which option is a correct use case for regression in Machine Learning?

55. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

56. When working with Machine Learning, why would a developer use features? (variation 91)

57. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

58. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

59. When working with Machine Learning, why would a developer use features? (variation 351)

60. Which statement best describes training data in Machine Learning? (variation 90)
