ICSE Previous Year Practice 2022 (2022)

Subject: General | Topic: Machine Learning

1. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

2. When working with Machine Learning, why would a developer use features? (variation 101)

3. Which option is a correct use case for regression in Machine Learning? (variation 103)

4. When working with Machine Learning, why would a developer use train-test split? (variation 76)

5. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

7. Which statement best describes training data in Machine Learning? (variation 100)

8. Which statement best describes overfitting in Machine Learning? (variation 75)

9. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

10. Which statement best describes overfitting in Machine Learning? (variation 355)

11. Which statement best describes overfitting in Machine Learning? (variation 95)

12. Which option is a correct use case for confusion matrix in Machine Learning?

13. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

14. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

15. When working with Machine Learning, why would a developer use train-test split? (variation 86)

16. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

17. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

18. Which option is a correct use case for regression in Machine Learning? (variation 93)

19. What is the most accurate beginner-level explanation of accuracy? (variation 77)

20. When working with Machine Learning, why would a developer use features? (variation 351)

21. Which option is a correct use case for regression in Machine Learning? (variation 73)

22. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

23. What is the most accurate beginner-level explanation of labels? (variation 72)

24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

25. Which statement best describes overfitting in Machine Learning? (variation 85)

26. When working with Machine Learning, why would a developer use features? (variation 81)

27. What is the most accurate beginner-level explanation of labels? (variation 92)

28. Which statement best describes overfitting in Machine Learning?

29. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

30. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

31. Which statement best describes training data in Machine Learning?

32. What is the most accurate beginner-level explanation of accuracy? (variation 357)

33. What is the most accurate beginner-level explanation of accuracy? (variation 97)

34. What is the most accurate beginner-level explanation of labels?

35. What is the most accurate beginner-level explanation of accuracy?

36. When working with Machine Learning, why would a developer use features? (variation 91)

37. Which statement best describes training data in Machine Learning? (variation 90)

38. What is the most accurate beginner-level explanation of labels? (variation 102)

39. Which option is a correct use case for regression in Machine Learning? (variation 83)

40. When working with Machine Learning, why would a developer use train-test split? (variation 106)

41. What is the most accurate beginner-level explanation of labels? (variation 352)

42. What is the most accurate beginner-level explanation of accuracy? (variation 107)

43. When working with Machine Learning, why would a developer use features?

44. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

45. Which statement best describes training data in Machine Learning? (variation 80)

46. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

47. When working with Machine Learning, why would a developer use train-test split?

48. Which statement best describes overfitting in Machine Learning? (variation 105)

49. What is the most accurate beginner-level explanation of accuracy? (variation 87)

50. Which statement best describes training data in Machine Learning? (variation 70)

51. Which option is a correct use case for regression in Machine Learning? (variation 353)

52. Which option is a correct use case for regression in Machine Learning?

53. When working with Machine Learning, why would a developer use features? (variation 71)

54. What is the most accurate beginner-level explanation of labels? (variation 82)

55. Which statement best describes training data in Machine Learning? (variation 350)

56. A student says 'classification' is not relevant to real projects. What is the best correction?

57. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

58. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

59. When working with Machine Learning, why would a developer use train-test split? (variation 356)

60. When working with Machine Learning, why would a developer use train-test split? (variation 96)
