UPSC Previous Year Practice 2021 (2021)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of accuracy? (variation 87)

2. Which statement best describes overfitting in Machine Learning? (variation 355)

3. When working with Machine Learning, why would a developer use train-test split? (variation 86)

4. What is the most accurate beginner-level explanation of labels? (variation 92)

5. Which statement best describes training data in Machine Learning? (variation 90)

6. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

7. What is the most accurate beginner-level explanation of labels? (variation 352)

8. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

9. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

10. Which statement best describes overfitting in Machine Learning? (variation 105)

11. What is the most accurate beginner-level explanation of accuracy? (variation 107)

12. When working with Machine Learning, why would a developer use train-test split? (variation 76)

13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

14. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

15. Which option is a correct use case for regression in Machine Learning? (variation 83)

16. When working with Machine Learning, why would a developer use features? (variation 91)

17. Which option is a correct use case for confusion matrix in Machine Learning?

18. Which statement best describes training data in Machine Learning? (variation 70)

19. What is the most accurate beginner-level explanation of accuracy? (variation 97)

20. Which statement best describes training data in Machine Learning? (variation 100)

21. Which statement best describes overfitting in Machine Learning? (variation 85)

22. Which option is a correct use case for regression in Machine Learning? (variation 103)

23. Which option is a correct use case for regression in Machine Learning? (variation 73)

24. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

25. Which option is a correct use case for regression in Machine Learning?

26. Which statement best describes training data in Machine Learning? (variation 350)

27. When working with Machine Learning, why would a developer use train-test split? (variation 106)

28. When working with Machine Learning, why would a developer use features? (variation 351)

29. A student says 'classification' is not relevant to real projects. What is the best correction?

30. When working with Machine Learning, why would a developer use train-test split? (variation 96)

31. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

32. When working with Machine Learning, why would a developer use train-test split? (variation 356)

33. When working with Machine Learning, why would a developer use train-test split?

34. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

35. What is the most accurate beginner-level explanation of labels? (variation 82)

36. When working with Machine Learning, why would a developer use features? (variation 81)

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

38. What is the most accurate beginner-level explanation of accuracy? (variation 77)

39. What is the most accurate beginner-level explanation of labels?

40. Which statement best describes training data in Machine Learning?

41. Which option is a correct use case for regression in Machine Learning? (variation 353)

42. Which statement best describes overfitting in Machine Learning? (variation 75)

43. Which statement best describes training data in Machine Learning? (variation 80)

44. Which statement best describes overfitting in Machine Learning?

45. What is the most accurate beginner-level explanation of accuracy?

46. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

47. What is the most accurate beginner-level explanation of labels? (variation 72)

48. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

49. When working with Machine Learning, why would a developer use features? (variation 101)

50. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

51. What is the most accurate beginner-level explanation of labels? (variation 102)

52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

53. When working with Machine Learning, why would a developer use features?

54. When working with Machine Learning, why would a developer use features? (variation 71)

55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

56. Which statement best describes overfitting in Machine Learning? (variation 95)

57. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

58. What is the most accurate beginner-level explanation of accuracy? (variation 357)

59. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

60. Which option is a correct use case for regression in Machine Learning? (variation 93)
