UPSC Previous Year Practice 2017 (2017)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction?

2. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

3. Which statement best describes overfitting in Machine Learning? (variation 105)

4. Which statement best describes training data in Machine Learning? (variation 350)

5. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

7. Which statement best describes training data in Machine Learning? (variation 70)

8. What is the most accurate beginner-level explanation of accuracy? (variation 107)

9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

10. Which statement best describes training data in Machine Learning? (variation 80)

11. What is the most accurate beginner-level explanation of accuracy? (variation 87)

12. Which statement best describes training data in Machine Learning?

13. Which statement best describes overfitting in Machine Learning?

14. Which option is a correct use case for regression in Machine Learning? (variation 353)

15. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

16. Which statement best describes overfitting in Machine Learning? (variation 95)

17. When working with Machine Learning, why would a developer use train-test split? (variation 86)

18. What is the most accurate beginner-level explanation of accuracy?

19. When working with Machine Learning, why would a developer use train-test split? (variation 356)

20. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

21. When working with Machine Learning, why would a developer use train-test split? (variation 76)

22. What is the most accurate beginner-level explanation of labels? (variation 352)

23. What is the most accurate beginner-level explanation of labels?

24. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

25. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

26. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

27. Which option is a correct use case for regression in Machine Learning? (variation 73)

28. Which statement best describes overfitting in Machine Learning? (variation 75)

29. Which option is a correct use case for regression in Machine Learning? (variation 83)

30. What is the most accurate beginner-level explanation of labels? (variation 72)

31. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

32. What is the most accurate beginner-level explanation of labels? (variation 92)

33. When working with Machine Learning, why would a developer use train-test split? (variation 106)

34. Which statement best describes overfitting in Machine Learning? (variation 355)

35. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

36. Which statement best describes training data in Machine Learning? (variation 100)

37. When working with Machine Learning, why would a developer use features? (variation 101)

38. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

39. Which option is a correct use case for regression in Machine Learning?

40. When working with Machine Learning, why would a developer use features? (variation 91)

41. Which option is a correct use case for regression in Machine Learning? (variation 93)

42. Which statement best describes training data in Machine Learning? (variation 90)

43. What is the most accurate beginner-level explanation of labels? (variation 102)

44. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

45. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

46. What is the most accurate beginner-level explanation of accuracy? (variation 357)

47. What is the most accurate beginner-level explanation of accuracy? (variation 97)

48. When working with Machine Learning, why would a developer use train-test split?

49. When working with Machine Learning, why would a developer use features?

50. Which option is a correct use case for regression in Machine Learning? (variation 103)

51. When working with Machine Learning, why would a developer use train-test split? (variation 96)

52. When working with Machine Learning, why would a developer use features? (variation 81)

53. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

54. What is the most accurate beginner-level explanation of accuracy? (variation 77)

55. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

56. What is the most accurate beginner-level explanation of labels? (variation 82)

57. When working with Machine Learning, why would a developer use features? (variation 71)

58. When working with Machine Learning, why would a developer use features? (variation 351)

59. Which statement best describes overfitting in Machine Learning? (variation 85)

60. Which option is a correct use case for confusion matrix in Machine Learning?
