University Exams Previous Year Practice 2018 (2018)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

2. What is the most accurate beginner-level explanation of labels? (variation 102)

3. What is the most accurate beginner-level explanation of accuracy? (variation 357)

4. When working with Machine Learning, why would a developer use train-test split? (variation 76)

5. Which option is a correct use case for regression in Machine Learning? (variation 93)

6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

7. When working with Machine Learning, why would a developer use features? (variation 81)

8. Which statement best describes training data in Machine Learning? (variation 100)

9. What is the most accurate beginner-level explanation of labels? (variation 352)

10. When working with Machine Learning, why would a developer use train-test split? (variation 106)

11. Which statement best describes overfitting in Machine Learning? (variation 75)

12. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

14. Which option is a correct use case for regression in Machine Learning?

15. Which option is a correct use case for regression in Machine Learning? (variation 103)

16. Which statement best describes overfitting in Machine Learning? (variation 105)

17. Which statement best describes overfitting in Machine Learning? (variation 355)

18. What is the most accurate beginner-level explanation of labels?

19. When working with Machine Learning, why would a developer use features? (variation 101)

20. When working with Machine Learning, why would a developer use features?

21. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

22. Which statement best describes overfitting in Machine Learning? (variation 85)

23. Which option is a correct use case for regression in Machine Learning? (variation 353)

24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

25. What is the most accurate beginner-level explanation of accuracy? (variation 87)

26. What is the most accurate beginner-level explanation of labels? (variation 72)

27. When working with Machine Learning, why would a developer use train-test split? (variation 86)

28. Which statement best describes training data in Machine Learning? (variation 350)

29. Which option is a correct use case for confusion matrix in Machine Learning?

30. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

31. What is the most accurate beginner-level explanation of accuracy? (variation 77)

32. Which statement best describes overfitting in Machine Learning? (variation 95)

33. Which option is a correct use case for regression in Machine Learning? (variation 83)

34. A student says 'classification' is not relevant to real projects. What is the best correction?

35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

36. When working with Machine Learning, why would a developer use features? (variation 351)

37. Which statement best describes training data in Machine Learning? (variation 90)

38. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

39. What is the most accurate beginner-level explanation of accuracy?

40. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

41. Which statement best describes training data in Machine Learning?

42. What is the most accurate beginner-level explanation of accuracy? (variation 107)

43. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

44. Which statement best describes overfitting in Machine Learning?

45. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

46. What is the most accurate beginner-level explanation of accuracy? (variation 97)

47. What is the most accurate beginner-level explanation of labels? (variation 82)

48. When working with Machine Learning, why would a developer use train-test split? (variation 96)

49. Which option is a correct use case for regression in Machine Learning? (variation 73)

50. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

51. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

52. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

53. Which statement best describes training data in Machine Learning? (variation 70)

54. When working with Machine Learning, why would a developer use features? (variation 91)

55. When working with Machine Learning, why would a developer use train-test split? (variation 356)

56. When working with Machine Learning, why would a developer use train-test split?

57. When working with Machine Learning, why would a developer use features? (variation 71)

58. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

59. What is the most accurate beginner-level explanation of labels? (variation 92)

60. Which statement best describes training data in Machine Learning? (variation 80)
