State Board Previous Year Practice 2025 (2025)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

2. Which option is a correct use case for regression in Machine Learning?

3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

4. What is the most accurate beginner-level explanation of accuracy? (variation 87)

5. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

6. When working with Machine Learning, why would a developer use features? (variation 71)

7. What is the most accurate beginner-level explanation of labels? (variation 102)

8. Which statement best describes overfitting in Machine Learning? (variation 355)

9. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

10. What is the most accurate beginner-level explanation of labels? (variation 72)

11. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

12. Which option is a correct use case for regression in Machine Learning? (variation 103)

13. Which option is a correct use case for regression in Machine Learning? (variation 73)

14. Which statement best describes overfitting in Machine Learning? (variation 75)

15. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

17. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

18. When working with Machine Learning, why would a developer use features? (variation 351)

19. Which statement best describes overfitting in Machine Learning? (variation 95)

20. Which statement best describes training data in Machine Learning? (variation 70)

21. Which statement best describes training data in Machine Learning? (variation 80)

22. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

23. When working with Machine Learning, why would a developer use train-test split? (variation 76)

24. Which statement best describes training data in Machine Learning?

25. When working with Machine Learning, why would a developer use train-test split?

26. When working with Machine Learning, why would a developer use train-test split? (variation 86)

27. Which option is a correct use case for regression in Machine Learning? (variation 93)

28. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

29. What is the most accurate beginner-level explanation of labels?

30. Which statement best describes training data in Machine Learning? (variation 90)

31. What is the most accurate beginner-level explanation of labels? (variation 82)

32. A student says 'classification' is not relevant to real projects. What is the best correction?

33. When working with Machine Learning, why would a developer use features? (variation 81)

34. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

35. Which statement best describes overfitting in Machine Learning? (variation 105)

36. Which statement best describes training data in Machine Learning? (variation 350)

37. Which statement best describes overfitting in Machine Learning? (variation 85)

38. When working with Machine Learning, why would a developer use train-test split? (variation 96)

39. What is the most accurate beginner-level explanation of accuracy? (variation 357)

40. What is the most accurate beginner-level explanation of labels? (variation 92)

41. When working with Machine Learning, why would a developer use features? (variation 101)

42. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

43. Which option is a correct use case for regression in Machine Learning? (variation 353)

44. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

45. What is the most accurate beginner-level explanation of accuracy? (variation 77)

46. When working with Machine Learning, why would a developer use features?

47. When working with Machine Learning, why would a developer use train-test split? (variation 356)

48. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

49. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

50. What is the most accurate beginner-level explanation of accuracy? (variation 107)

51. Which statement best describes overfitting in Machine Learning?

52. Which option is a correct use case for regression in Machine Learning? (variation 83)

53. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

54. When working with Machine Learning, why would a developer use train-test split? (variation 106)

55. What is the most accurate beginner-level explanation of accuracy?

56. When working with Machine Learning, why would a developer use features? (variation 91)

57. Which option is a correct use case for confusion matrix in Machine Learning?

58. What is the most accurate beginner-level explanation of accuracy? (variation 97)

59. Which statement best describes training data in Machine Learning? (variation 100)

60. What is the most accurate beginner-level explanation of labels? (variation 352)
