University Exams Previous Year Practice 2017 (2017)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning?

2. What is the most accurate beginner-level explanation of accuracy?

3. What is the most accurate beginner-level explanation of accuracy? (variation 107)

4. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

5. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

6. What is the most accurate beginner-level explanation of accuracy? (variation 77)

7. What is the most accurate beginner-level explanation of accuracy? (variation 97)

8. Which statement best describes training data in Machine Learning? (variation 350)

9. When working with Machine Learning, why would a developer use features? (variation 101)

10. When working with Machine Learning, why would a developer use train-test split? (variation 86)

11. What is the most accurate beginner-level explanation of labels? (variation 102)

12. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

13. What is the most accurate beginner-level explanation of labels?

14. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

15. When working with Machine Learning, why would a developer use train-test split? (variation 76)

16. Which statement best describes overfitting in Machine Learning? (variation 355)

17. What is the most accurate beginner-level explanation of accuracy? (variation 87)

18. Which option is a correct use case for regression in Machine Learning? (variation 103)

19. Which statement best describes training data in Machine Learning? (variation 90)

20. What is the most accurate beginner-level explanation of accuracy? (variation 357)

21. When working with Machine Learning, why would a developer use features? (variation 81)

22. Which option is a correct use case for regression in Machine Learning?

23. Which option is a correct use case for regression in Machine Learning? (variation 353)

24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

25. Which option is a correct use case for regression in Machine Learning? (variation 73)

26. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

27. Which statement best describes overfitting in Machine Learning? (variation 105)

28. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

29. Which statement best describes training data in Machine Learning? (variation 80)

30. Which option is a correct use case for regression in Machine Learning? (variation 83)

31. What is the most accurate beginner-level explanation of labels? (variation 352)

32. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

33. When working with Machine Learning, why would a developer use train-test split? (variation 106)

34. Which option is a correct use case for confusion matrix in Machine Learning?

35. When working with Machine Learning, why would a developer use features? (variation 351)

36. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

37. A student says 'classification' is not relevant to real projects. What is the best correction?

38. When working with Machine Learning, why would a developer use features? (variation 71)

39. When working with Machine Learning, why would a developer use features?

40. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

41. Which statement best describes overfitting in Machine Learning? (variation 75)

42. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

43. What is the most accurate beginner-level explanation of labels? (variation 72)

44. Which statement best describes overfitting in Machine Learning? (variation 85)

45. When working with Machine Learning, why would a developer use train-test split? (variation 356)

46. Which option is a correct use case for regression in Machine Learning? (variation 93)

47. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

48. Which statement best describes training data in Machine Learning?

49. Which statement best describes training data in Machine Learning? (variation 100)

50. What is the most accurate beginner-level explanation of labels? (variation 82)

51. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

52. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

53. Which statement best describes training data in Machine Learning? (variation 70)

54. When working with Machine Learning, why would a developer use train-test split?

55. When working with Machine Learning, why would a developer use features? (variation 91)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

57. When working with Machine Learning, why would a developer use train-test split? (variation 96)

58. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

59. What is the most accurate beginner-level explanation of labels? (variation 92)

60. Which statement best describes overfitting in Machine Learning? (variation 95)
