IIT-JEE Previous Year Practice 2023 (2023)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

2. What is the most accurate beginner-level explanation of accuracy? (variation 357)

3. Which option is a correct use case for regression in Machine Learning?

4. Which option is a correct use case for regression in Machine Learning? (variation 353)

5. What is the most accurate beginner-level explanation of labels? (variation 82)

6. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

7. Which option is a correct use case for confusion matrix in Machine Learning?

8. Which option is a correct use case for regression in Machine Learning? (variation 103)

9. When working with Machine Learning, why would a developer use features? (variation 91)

10. What is the most accurate beginner-level explanation of labels? (variation 352)

11. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

12. What is the most accurate beginner-level explanation of accuracy?

13. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

14. When working with Machine Learning, why would a developer use features? (variation 351)

15. Which statement best describes training data in Machine Learning? (variation 80)

16. When working with Machine Learning, why would a developer use features? (variation 81)

17. What is the most accurate beginner-level explanation of labels?

18. When working with Machine Learning, why would a developer use features? (variation 101)

19. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

20. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

21. When working with Machine Learning, why would a developer use train-test split? (variation 76)

22. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

23. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

24. What is the most accurate beginner-level explanation of labels? (variation 72)

25. What is the most accurate beginner-level explanation of accuracy? (variation 97)

26. Which statement best describes training data in Machine Learning? (variation 90)

27. What is the most accurate beginner-level explanation of labels? (variation 102)

28. Which statement best describes overfitting in Machine Learning? (variation 355)

29. When working with Machine Learning, why would a developer use features?

30. When working with Machine Learning, why would a developer use train-test split? (variation 356)

31. What is the most accurate beginner-level explanation of accuracy? (variation 107)

32. Which option is a correct use case for regression in Machine Learning? (variation 83)

33. Which statement best describes training data in Machine Learning?

34. Which statement best describes overfitting in Machine Learning? (variation 105)

35. Which statement best describes overfitting in Machine Learning? (variation 95)

36. When working with Machine Learning, why would a developer use train-test split? (variation 96)

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

38. What is the most accurate beginner-level explanation of accuracy? (variation 77)

39. When working with Machine Learning, why would a developer use train-test split? (variation 106)

40. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

41. What is the most accurate beginner-level explanation of labels? (variation 92)

42. Which statement best describes overfitting in Machine Learning? (variation 85)

43. Which option is a correct use case for regression in Machine Learning? (variation 73)

44. When working with Machine Learning, why would a developer use features? (variation 71)

45. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

46. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

47. Which statement best describes training data in Machine Learning? (variation 350)

48. When working with Machine Learning, why would a developer use train-test split?

49. Which statement best describes overfitting in Machine Learning? (variation 75)

50. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

51. Which statement best describes overfitting in Machine Learning?

52. Which statement best describes training data in Machine Learning? (variation 70)

53. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

54. Which option is a correct use case for regression in Machine Learning? (variation 93)

55. Which statement best describes training data in Machine Learning? (variation 100)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

57. A student says 'classification' is not relevant to real projects. What is the best correction?

58. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

59. What is the most accurate beginner-level explanation of accuracy? (variation 87)

60. When working with Machine Learning, why would a developer use train-test split? (variation 86)
