ICSE Previous Year Practice 2019 (2019)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 86)

2. When working with Machine Learning, why would a developer use features? (variation 101)

3. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

4. What is the most accurate beginner-level explanation of accuracy? (variation 87)

5. Which statement best describes overfitting in Machine Learning? (variation 95)

6. Which statement best describes overfitting in Machine Learning? (variation 85)

7. When working with Machine Learning, why would a developer use features? (variation 81)

8. Which statement best describes overfitting in Machine Learning? (variation 355)

9. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

10. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

11. When working with Machine Learning, why would a developer use train-test split? (variation 96)

12. Which statement best describes training data in Machine Learning? (variation 90)

13. Which option is a correct use case for regression in Machine Learning? (variation 83)

14. When working with Machine Learning, why would a developer use features? (variation 71)

15. What is the most accurate beginner-level explanation of accuracy? (variation 357)

16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

17. What is the most accurate beginner-level explanation of accuracy?

18. When working with Machine Learning, why would a developer use features?

19. Which statement best describes overfitting in Machine Learning? (variation 75)

20. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

21. Which statement best describes training data in Machine Learning? (variation 100)

22. Which option is a correct use case for regression in Machine Learning? (variation 93)

23. When working with Machine Learning, why would a developer use features? (variation 351)

24. Which statement best describes training data in Machine Learning? (variation 350)

25. What is the most accurate beginner-level explanation of labels? (variation 72)

26. Which statement best describes overfitting in Machine Learning?

27. Which option is a correct use case for regression in Machine Learning? (variation 73)

28. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

29. What is the most accurate beginner-level explanation of accuracy? (variation 97)

30. Which option is a correct use case for confusion matrix in Machine Learning?

31. Which statement best describes training data in Machine Learning? (variation 80)

32. When working with Machine Learning, why would a developer use train-test split? (variation 76)

33. What is the most accurate beginner-level explanation of accuracy? (variation 77)

34. What is the most accurate beginner-level explanation of accuracy? (variation 107)

35. Which option is a correct use case for regression in Machine Learning? (variation 103)

36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

38. A student says 'classification' is not relevant to real projects. What is the best correction?

39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

40. What is the most accurate beginner-level explanation of labels?

41. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

42. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

43. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

44. Which statement best describes training data in Machine Learning? (variation 70)

45. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

46. What is the most accurate beginner-level explanation of labels? (variation 92)

47. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

48. What is the most accurate beginner-level explanation of labels? (variation 352)

49. Which option is a correct use case for regression in Machine Learning? (variation 353)

50. Which statement best describes overfitting in Machine Learning? (variation 105)

51. Which option is a correct use case for regression in Machine Learning?

52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

53. Which statement best describes training data in Machine Learning?

54. When working with Machine Learning, why would a developer use features? (variation 91)

55. What is the most accurate beginner-level explanation of labels? (variation 102)

56. When working with Machine Learning, why would a developer use train-test split?

57. When working with Machine Learning, why would a developer use train-test split? (variation 106)

58. When working with Machine Learning, why would a developer use train-test split? (variation 356)

59. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

60. What is the most accurate beginner-level explanation of labels? (variation 82)
