IIT-JEE Previous Year Practice 2019 (2019)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of accuracy? (variation 87)

2. What is the most accurate beginner-level explanation of labels? (variation 92)

3. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

4. Which option is a correct use case for regression in Machine Learning?

5. Which option is a correct use case for regression in Machine Learning? (variation 93)

6. When working with Machine Learning, why would a developer use train-test split? (variation 356)

7. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

8. When working with Machine Learning, why would a developer use features? (variation 71)

9. When working with Machine Learning, why would a developer use train-test split? (variation 96)

10. Which statement best describes overfitting in Machine Learning? (variation 85)

11. When working with Machine Learning, why would a developer use train-test split? (variation 76)

12. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

13. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

14. When working with Machine Learning, why would a developer use features? (variation 101)

15. Which option is a correct use case for regression in Machine Learning? (variation 103)

16. Which option is a correct use case for confusion matrix in Machine Learning?

17. When working with Machine Learning, why would a developer use features? (variation 81)

18. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

19. Which statement best describes overfitting in Machine Learning? (variation 95)

20. What is the most accurate beginner-level explanation of labels? (variation 352)

21. When working with Machine Learning, why would a developer use features? (variation 351)

22. What is the most accurate beginner-level explanation of labels? (variation 102)

23. When working with Machine Learning, why would a developer use features? (variation 91)

24. Which option is a correct use case for regression in Machine Learning? (variation 353)

25. What is the most accurate beginner-level explanation of accuracy? (variation 77)

26. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

27. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

28. Which statement best describes overfitting in Machine Learning? (variation 75)

29. What is the most accurate beginner-level explanation of labels? (variation 82)

30. What is the most accurate beginner-level explanation of accuracy? (variation 107)

31. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

32. Which option is a correct use case for regression in Machine Learning? (variation 83)

33. When working with Machine Learning, why would a developer use features?

34. Which statement best describes overfitting in Machine Learning? (variation 105)

35. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

36. Which statement best describes overfitting in Machine Learning? (variation 355)

37. Which statement best describes overfitting in Machine Learning?

38. What is the most accurate beginner-level explanation of labels?

39. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

40. Which statement best describes training data in Machine Learning? (variation 80)

41. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

42. A student says 'classification' is not relevant to real projects. What is the best correction?

43. Which statement best describes training data in Machine Learning? (variation 70)

44. Which statement best describes training data in Machine Learning? (variation 350)

45. When working with Machine Learning, why would a developer use train-test split? (variation 86)

46. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

47. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

48. What is the most accurate beginner-level explanation of accuracy?

49. When working with Machine Learning, why would a developer use train-test split?

50. Which statement best describes training data in Machine Learning?

51. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

52. Which statement best describes training data in Machine Learning? (variation 100)

53. What is the most accurate beginner-level explanation of labels? (variation 72)

54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

55. When working with Machine Learning, why would a developer use train-test split? (variation 106)

56. What is the most accurate beginner-level explanation of accuracy? (variation 97)

57. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

58. Which statement best describes training data in Machine Learning? (variation 90)

59. Which option is a correct use case for regression in Machine Learning? (variation 73)

60. What is the most accurate beginner-level explanation of accuracy? (variation 357)
