# NEET Previous Year Practice 2019 (2019)

Subject: General | Topic: Machine Learning

1. Which statement best describes training data in Machine Learning? (variation 70)

2. When working with Machine Learning, why would a developer use features?

3. Which statement best describes overfitting in Machine Learning? (variation 355)

4. Which option is a correct use case for regression in Machine Learning? (variation 83)

5. What is the most accurate beginner-level explanation of accuracy? (variation 97)

6. Which statement best describes overfitting in Machine Learning? (variation 85)

7. What is the most accurate beginner-level explanation of labels? (variation 72)

8. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

9. Which option is a correct use case for regression in Machine Learning? (variation 73)

10. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

11. Which option is a correct use case for regression in Machine Learning? (variation 103)

12. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

13. Which statement best describes training data in Machine Learning? (variation 80)

14. What is the most accurate beginner-level explanation of accuracy? (variation 77)

15. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

16. Which statement best describes training data in Machine Learning?

17. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

18. What is the most accurate beginner-level explanation of labels? (variation 352)

19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

20. What is the most accurate beginner-level explanation of labels? (variation 92)

21. What is the most accurate beginner-level explanation of labels? (variation 102)

22. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

23. When working with Machine Learning, why would a developer use train-test split? (variation 356)

24. When working with Machine Learning, why would a developer use train-test split? (variation 106)

25. What is the most accurate beginner-level explanation of labels? (variation 82)

26. When working with Machine Learning, why would a developer use train-test split?

27. Which statement best describes training data in Machine Learning? (variation 90)

28. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

29. A student says 'classification' is not relevant to real projects. What is the best correction?

30. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

31. When working with Machine Learning, why would a developer use features? (variation 81)

32. Which option is a correct use case for regression in Machine Learning? (variation 93)

33. When working with Machine Learning, why would a developer use features? (variation 101)

34. When working with Machine Learning, why would a developer use train-test split? (variation 86)

35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

36. What is the most accurate beginner-level explanation of accuracy? (variation 357)

37. When working with Machine Learning, why would a developer use features? (variation 71)

38. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

39. What is the most accurate beginner-level explanation of accuracy? (variation 87)

40. Which option is a correct use case for regression in Machine Learning? (variation 353)

41. Which statement best describes training data in Machine Learning? (variation 100)

42. Which option is a correct use case for regression in Machine Learning?

43. What is the most accurate beginner-level explanation of accuracy? (variation 107)

44. Which statement best describes overfitting in Machine Learning? (variation 75)

45. When working with Machine Learning, why would a developer use train-test split? (variation 76)

46. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

47. When working with Machine Learning, why would a developer use features? (variation 91)

48. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

49. When working with Machine Learning, why would a developer use features? (variation 351)

50. Which option is a correct use case for confusion matrix in Machine Learning?

51. When working with Machine Learning, why would a developer use train-test split? (variation 96)

52. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

53. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

54. Which statement best describes overfitting in Machine Learning?

55. Which statement best describes overfitting in Machine Learning? (variation 105)

56. Which statement best describes overfitting in Machine Learning? (variation 95)

57. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

58. Which statement best describes training data in Machine Learning? (variation 350)

59. What is the most accurate beginner-level explanation of labels?

60. What is the most accurate beginner-level explanation of accuracy?
