# CBSE Previous Year Practice 2023 (2023)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

2. Which statement best describes overfitting in Machine Learning? (variation 75)

3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

4. Which option is a correct use case for regression in Machine Learning? (variation 93)

5. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

7. Which option is a correct use case for regression in Machine Learning? (variation 353)

8. When working with Machine Learning, why would a developer use train-test split? (variation 86)

9. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

10. Which statement best describes overfitting in Machine Learning? (variation 85)

11. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

12. What is the most accurate beginner-level explanation of labels? (variation 102)

13. Which statement best describes training data in Machine Learning?

14. Which option is a correct use case for regression in Machine Learning?

15. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

17. Which statement best describes overfitting in Machine Learning? (variation 105)

18. What is the most accurate beginner-level explanation of accuracy?

19. Which statement best describes overfitting in Machine Learning? (variation 95)

20. When working with Machine Learning, why would a developer use train-test split? (variation 76)

21. What is the most accurate beginner-level explanation of labels? (variation 72)

22. A student says 'classification' is not relevant to real projects. What is the best correction?

23. What is the most accurate beginner-level explanation of labels?

24. When working with Machine Learning, why would a developer use train-test split? (variation 106)

25. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

26. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

27. What is the most accurate beginner-level explanation of accuracy? (variation 107)

28. What is the most accurate beginner-level explanation of accuracy? (variation 77)

29. What is the most accurate beginner-level explanation of accuracy? (variation 97)

30. Which statement best describes training data in Machine Learning? (variation 80)

31. Which statement best describes overfitting in Machine Learning? (variation 355)

32. Which option is a correct use case for regression in Machine Learning? (variation 103)

33. When working with Machine Learning, why would a developer use features? (variation 71)

34. When working with Machine Learning, why would a developer use features?

35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

36. Which option is a correct use case for confusion matrix in Machine Learning?

37. When working with Machine Learning, why would a developer use features? (variation 101)

38. When working with Machine Learning, why would a developer use features? (variation 91)

39. When working with Machine Learning, why would a developer use features? (variation 351)

40. When working with Machine Learning, why would a developer use train-test split? (variation 356)

41. What is the most accurate beginner-level explanation of labels? (variation 352)

42. Which statement best describes training data in Machine Learning? (variation 70)

43. When working with Machine Learning, why would a developer use features? (variation 81)

44. Which statement best describes training data in Machine Learning? (variation 350)

45. What is the most accurate beginner-level explanation of accuracy? (variation 87)

46. What is the most accurate beginner-level explanation of labels? (variation 92)

47. When working with Machine Learning, why would a developer use train-test split?

48. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

49. Which statement best describes overfitting in Machine Learning?

50. What is the most accurate beginner-level explanation of accuracy? (variation 357)

51. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

52. Which option is a correct use case for regression in Machine Learning? (variation 73)

53. Which statement best describes training data in Machine Learning? (variation 90)

54. Which statement best describes training data in Machine Learning? (variation 100)

55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

56. Which option is a correct use case for regression in Machine Learning? (variation 83)

57. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

58. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

59. What is the most accurate beginner-level explanation of labels? (variation 82)

60. When working with Machine Learning, why would a developer use train-test split? (variation 96)
