University Exams Previous Year Practice 2025 (2025)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use features? (variation 351)

2. Which statement best describes overfitting in Machine Learning?

3. Which statement best describes overfitting in Machine Learning? (variation 95)

4. When working with Machine Learning, why would a developer use train-test split? (variation 106)

5. When working with Machine Learning, why would a developer use features? (variation 81)

6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

7. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

8. What is the most accurate beginner-level explanation of labels? (variation 102)

9. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

10. Which option is a correct use case for regression in Machine Learning? (variation 93)

11. When working with Machine Learning, why would a developer use features?

12. Which option is a correct use case for regression in Machine Learning? (variation 103)

13. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

14. What is the most accurate beginner-level explanation of labels? (variation 82)

15. What is the most accurate beginner-level explanation of accuracy? (variation 97)

16. Which option is a correct use case for regression in Machine Learning? (variation 353)

17. Which statement best describes training data in Machine Learning? (variation 90)

18. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

19. A student says 'classification' is not relevant to real projects. What is the best correction?

20. What is the most accurate beginner-level explanation of labels? (variation 352)

21. When working with Machine Learning, why would a developer use train-test split? (variation 356)

22. Which statement best describes training data in Machine Learning?

23. What is the most accurate beginner-level explanation of accuracy? (variation 87)

24. Which statement best describes overfitting in Machine Learning? (variation 355)

25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

26. Which statement best describes training data in Machine Learning? (variation 80)

27. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

28. Which statement best describes training data in Machine Learning? (variation 70)

29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

30. Which option is a correct use case for regression in Machine Learning? (variation 73)

31. What is the most accurate beginner-level explanation of labels? (variation 72)

32. What is the most accurate beginner-level explanation of accuracy?

33. What is the most accurate beginner-level explanation of labels? (variation 92)

34. When working with Machine Learning, why would a developer use features? (variation 91)

35. Which statement best describes overfitting in Machine Learning? (variation 85)

36. When working with Machine Learning, why would a developer use train-test split? (variation 76)

37. What is the most accurate beginner-level explanation of accuracy? (variation 77)

38. When working with Machine Learning, why would a developer use train-test split?

39. When working with Machine Learning, why would a developer use train-test split? (variation 86)

40. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

41. Which option is a correct use case for confusion matrix in Machine Learning?

42. Which statement best describes training data in Machine Learning? (variation 350)

43. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

44. When working with Machine Learning, why would a developer use train-test split? (variation 96)

45. Which option is a correct use case for regression in Machine Learning?

46. When working with Machine Learning, why would a developer use features? (variation 101)

47. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

48. Which statement best describes overfitting in Machine Learning? (variation 105)

49. Which option is a correct use case for regression in Machine Learning? (variation 83)

50. Which statement best describes overfitting in Machine Learning? (variation 75)

51. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

52. When working with Machine Learning, why would a developer use features? (variation 71)

53. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

54. Which statement best describes training data in Machine Learning? (variation 100)

55. What is the most accurate beginner-level explanation of accuracy? (variation 357)

56. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

57. What is the most accurate beginner-level explanation of accuracy? (variation 107)

58. What is the most accurate beginner-level explanation of labels?

59. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

60. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
