ICSE Previous Year Practice 2021 (2021)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of labels? (variation 82)

2. When working with Machine Learning, why would a developer use train-test split? (variation 76)

3. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

4. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

5. Which option is a correct use case for regression in Machine Learning? (variation 353)

6. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

7. What is the most accurate beginner-level explanation of accuracy? (variation 87)

8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

9. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

10. Which statement best describes training data in Machine Learning? (variation 100)

11. What is the most accurate beginner-level explanation of accuracy? (variation 357)

12. Which statement best describes training data in Machine Learning? (variation 90)

13. Which statement best describes overfitting in Machine Learning? (variation 85)

14. What is the most accurate beginner-level explanation of accuracy? (variation 107)

15. What is the most accurate beginner-level explanation of accuracy? (variation 77)

16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

17. When working with Machine Learning, why would a developer use train-test split?

18. Which option is a correct use case for regression in Machine Learning? (variation 83)

19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

20. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

21. When working with Machine Learning, why would a developer use train-test split? (variation 356)

22. What is the most accurate beginner-level explanation of labels? (variation 352)

23. Which statement best describes overfitting in Machine Learning? (variation 105)

24. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

25. When working with Machine Learning, why would a developer use features? (variation 351)

26. Which statement best describes overfitting in Machine Learning? (variation 75)

27. Which statement best describes overfitting in Machine Learning? (variation 355)

28. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

29. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

30. What is the most accurate beginner-level explanation of labels? (variation 72)

31. When working with Machine Learning, why would a developer use features?

32. When working with Machine Learning, why would a developer use train-test split? (variation 96)

33. A student says 'classification' is not relevant to real projects. What is the best correction?

34. Which statement best describes overfitting in Machine Learning? (variation 95)

35. Which statement best describes training data in Machine Learning? (variation 80)

36. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

37. When working with Machine Learning, why would a developer use features? (variation 81)

38. Which statement best describes training data in Machine Learning?

39. When working with Machine Learning, why would a developer use features? (variation 71)

40. Which option is a correct use case for regression in Machine Learning? (variation 93)

41. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

42. What is the most accurate beginner-level explanation of labels? (variation 102)

43. When working with Machine Learning, why would a developer use features? (variation 91)

44. What is the most accurate beginner-level explanation of labels? (variation 92)

45. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

46. Which option is a correct use case for regression in Machine Learning? (variation 73)

47. What is the most accurate beginner-level explanation of accuracy?

48. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

49. Which statement best describes training data in Machine Learning? (variation 70)

50. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

51. When working with Machine Learning, why would a developer use train-test split? (variation 106)

52. Which option is a correct use case for confusion matrix in Machine Learning?

53. Which option is a correct use case for regression in Machine Learning? (variation 103)

54. When working with Machine Learning, why would a developer use train-test split? (variation 86)

55. Which statement best describes training data in Machine Learning? (variation 350)

56. Which statement best describes overfitting in Machine Learning?

57. Which option is a correct use case for regression in Machine Learning?

58. When working with Machine Learning, why would a developer use features? (variation 101)

59. What is the most accurate beginner-level explanation of labels?

60. What is the most accurate beginner-level explanation of accuracy? (variation 97)
