CBSE Previous Year Practice 2018 (2018)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of accuracy? (variation 97)

2. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

3. What is the most accurate beginner-level explanation of accuracy? (variation 357)

4. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

5. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

6. When working with Machine Learning, why would a developer use features? (variation 101)

7. What is the most accurate beginner-level explanation of accuracy? (variation 87)

8. When working with Machine Learning, why would a developer use train-test split? (variation 96)

9. Which option is a correct use case for regression in Machine Learning? (variation 93)

10. What is the most accurate beginner-level explanation of accuracy? (variation 77)

11. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

12. When working with Machine Learning, why would a developer use train-test split?

13. A student says 'classification' is not relevant to real projects. What is the best correction?

14. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

15. Which statement best describes overfitting in Machine Learning? (variation 75)

16. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

17. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

18. When working with Machine Learning, why would a developer use features?

19. When working with Machine Learning, why would a developer use features? (variation 351)

20. Which statement best describes training data in Machine Learning?

21. Which statement best describes overfitting in Machine Learning? (variation 355)

22. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

23. Which statement best describes overfitting in Machine Learning? (variation 105)

24. When working with Machine Learning, why would a developer use features? (variation 71)

25. Which option is a correct use case for regression in Machine Learning? (variation 103)

26. When working with Machine Learning, why would a developer use train-test split? (variation 356)

27. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

28. Which option is a correct use case for regression in Machine Learning? (variation 73)

29. Which statement best describes training data in Machine Learning? (variation 100)

30. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

31. What is the most accurate beginner-level explanation of labels? (variation 352)

32. Which option is a correct use case for regression in Machine Learning?

33. What is the most accurate beginner-level explanation of labels? (variation 82)

34. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

35. Which statement best describes overfitting in Machine Learning? (variation 85)

36. What is the most accurate beginner-level explanation of labels? (variation 102)

37. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

38. What is the most accurate beginner-level explanation of accuracy?

39. When working with Machine Learning, why would a developer use train-test split? (variation 106)

40. Which statement best describes training data in Machine Learning? (variation 70)

41. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

42. What is the most accurate beginner-level explanation of accuracy? (variation 107)

43. What is the most accurate beginner-level explanation of labels?

44. What is the most accurate beginner-level explanation of labels? (variation 92)

45. Which statement best describes overfitting in Machine Learning? (variation 95)

46. When working with Machine Learning, why would a developer use train-test split? (variation 76)

47. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

48. Which statement best describes training data in Machine Learning? (variation 80)

49. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

50. Which option is a correct use case for confusion matrix in Machine Learning?

51. Which statement best describes overfitting in Machine Learning?

52. Which option is a correct use case for regression in Machine Learning? (variation 83)

53. When working with Machine Learning, why would a developer use features? (variation 91)

54. Which statement best describes training data in Machine Learning? (variation 350)

55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

56. What is the most accurate beginner-level explanation of labels? (variation 72)

57. Which option is a correct use case for regression in Machine Learning? (variation 353)

58. When working with Machine Learning, why would a developer use train-test split? (variation 86)

59. When working with Machine Learning, why would a developer use features? (variation 81)

60. Which statement best describes training data in Machine Learning? (variation 90)
