CBSE Previous Year Practice 2019 (2019)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use features?

2. When working with Machine Learning, why would a developer use train-test split? (variation 106)

3. Which statement best describes overfitting in Machine Learning? (variation 355)

4. Which statement best describes training data in Machine Learning? (variation 90)

5. Which statement best describes training data in Machine Learning?

6. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

7. Which statement best describes overfitting in Machine Learning? (variation 85)

8. Which statement best describes training data in Machine Learning? (variation 100)

9. When working with Machine Learning, why would a developer use features? (variation 91)

10. When working with Machine Learning, why would a developer use features? (variation 71)

11. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

12. What is the most accurate beginner-level explanation of labels? (variation 72)

13. When working with Machine Learning, why would a developer use features? (variation 81)

14. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

15. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

16. Which option is a correct use case for regression in Machine Learning? (variation 73)

17. Which option is a correct use case for regression in Machine Learning? (variation 83)

18. Which option is a correct use case for confusion matrix in Machine Learning?

19. When working with Machine Learning, why would a developer use features? (variation 351)

20. Which statement best describes overfitting in Machine Learning? (variation 95)

21. Which statement best describes training data in Machine Learning? (variation 80)

22. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

23. Which statement best describes overfitting in Machine Learning? (variation 105)

24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

25. Which statement best describes training data in Machine Learning? (variation 350)

26. When working with Machine Learning, why would a developer use train-test split? (variation 356)

27. What is the most accurate beginner-level explanation of labels? (variation 92)

28. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

30. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

31. When working with Machine Learning, why would a developer use train-test split?

32. Which statement best describes overfitting in Machine Learning?

33. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

34. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

35. Which option is a correct use case for regression in Machine Learning? (variation 93)

36. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

37. What is the most accurate beginner-level explanation of accuracy? (variation 87)

38. Which option is a correct use case for regression in Machine Learning?

39. What is the most accurate beginner-level explanation of labels? (variation 82)

40. When working with Machine Learning, why would a developer use features? (variation 101)

41. What is the most accurate beginner-level explanation of accuracy? (variation 97)

42. Which statement best describes training data in Machine Learning? (variation 70)

43. What is the most accurate beginner-level explanation of labels?

44. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

45. What is the most accurate beginner-level explanation of labels? (variation 102)

46. What is the most accurate beginner-level explanation of accuracy? (variation 77)

47. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

48. When working with Machine Learning, why would a developer use train-test split? (variation 86)

49. What is the most accurate beginner-level explanation of accuracy?

50. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

51. When working with Machine Learning, why would a developer use train-test split? (variation 76)

52. When working with Machine Learning, why would a developer use train-test split? (variation 96)

53. What is the most accurate beginner-level explanation of accuracy? (variation 357)

54. Which statement best describes overfitting in Machine Learning? (variation 75)

55. A student says 'classification' is not relevant to real projects. What is the best correction?

56. What is the most accurate beginner-level explanation of accuracy? (variation 107)

57. What is the most accurate beginner-level explanation of labels? (variation 352)

58. Which option is a correct use case for regression in Machine Learning? (variation 103)

59. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

60. Which option is a correct use case for regression in Machine Learning? (variation 353)
