CBSE Previous Year Practice 2026 (2026)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use features? (variation 101)

2. When working with Machine Learning, why would a developer use train-test split? (variation 86)

3. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

4. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

5. What is the most accurate beginner-level explanation of labels? (variation 102)

6. What is the most accurate beginner-level explanation of labels?

7. When working with Machine Learning, why would a developer use train-test split? (variation 96)

8. What is the most accurate beginner-level explanation of accuracy? (variation 107)

9. Which option is a correct use case for regression in Machine Learning?

10. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

11. When working with Machine Learning, why would a developer use features? (variation 71)

12. What is the most accurate beginner-level explanation of labels? (variation 352)

13. Which option is a correct use case for regression in Machine Learning? (variation 353)

14. When working with Machine Learning, why would a developer use train-test split? (variation 76)

15. What is the most accurate beginner-level explanation of accuracy? (variation 357)

16. What is the most accurate beginner-level explanation of accuracy? (variation 87)

17. When working with Machine Learning, why would a developer use features? (variation 91)

18. Which option is a correct use case for regression in Machine Learning? (variation 103)

19. Which statement best describes training data in Machine Learning? (variation 350)

20. When working with Machine Learning, why would a developer use features? (variation 351)

21. When working with Machine Learning, why would a developer use features? (variation 81)

22. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

23. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

24. Which statement best describes overfitting in Machine Learning? (variation 75)

25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

26. What is the most accurate beginner-level explanation of accuracy?

27. Which statement best describes training data in Machine Learning? (variation 80)

28. What is the most accurate beginner-level explanation of accuracy? (variation 97)

29. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

30. What is the most accurate beginner-level explanation of labels? (variation 92)

31. Which statement best describes overfitting in Machine Learning? (variation 355)

32. Which statement best describes overfitting in Machine Learning? (variation 105)

33. When working with Machine Learning, why would a developer use train-test split? (variation 106)

34. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

35. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

36. Which statement best describes overfitting in Machine Learning? (variation 85)

37. What is the most accurate beginner-level explanation of labels? (variation 72)

38. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

40. Which statement best describes training data in Machine Learning?

41. Which statement best describes training data in Machine Learning? (variation 100)

42. What is the most accurate beginner-level explanation of labels? (variation 82)

43. When working with Machine Learning, why would a developer use train-test split?

44. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

45. What is the most accurate beginner-level explanation of accuracy? (variation 77)

46. Which statement best describes overfitting in Machine Learning? (variation 95)

47. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

48. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

49. Which option is a correct use case for confusion matrix in Machine Learning?

50. A student says 'classification' is not relevant to real projects. What is the best correction?

51. When working with Machine Learning, why would a developer use features?

52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

53. Which statement best describes training data in Machine Learning? (variation 90)

54. Which statement best describes overfitting in Machine Learning?

55. Which option is a correct use case for regression in Machine Learning? (variation 93)

56. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

57. When working with Machine Learning, why would a developer use train-test split? (variation 356)

58. Which option is a correct use case for regression in Machine Learning? (variation 73)

59. Which option is a correct use case for regression in Machine Learning? (variation 83)

60. Which statement best describes training data in Machine Learning? (variation 70)
