

CBSE Previous Year Practice 2020 (2020)

Subject: General | Topic: C Programming

1. What is the most accurate beginner-level explanation of malloc? (variation 82)
2. What is the most accurate beginner-level explanation of malloc? (variation 102)
3. What is the most accurate beginner-level explanation of pass by pointer? (variation 357)
4. Which option is a correct use case for preprocessor macros in C Programming? (variation 358)
5. Which statement best describes the stack in C Programming? (variation 95)
6. Which statement best describes pointers in C Programming? (variation 90)
7. When working with C Programming, why would a developer use arrays? (variation 91)
8. A student says 'header files' is not relevant to real projects. What is the best correction? (variation 354)
9. When working with C Programming, why would a developer use null terminator?
10. When working with C Programming, why would a developer use arrays? (variation 71)
11. A student says 'header files' is not relevant to real projects. What is the best correction? (variation 104)
12. What is the most accurate beginner-level explanation of malloc?
13. Which option is a correct use case for preprocessor macros in C Programming? (variation 88)
14. A student says 'header files' is not relevant to real projects. What is the best correction?
15. Which option is a correct use case for preprocessor macros in C Programming? (variation 108)
16. Which statement best describes pointers in C Programming? (variation 80)
17. Which option is a correct use case for preprocessor macros in C Programming?

18. Which option is a correct use case for structs in C Programming? (variation 93)
19. What is the most accurate beginner-level explanation of malloc? (variation 72)
20. What is the most accurate beginner-level explanation of pass by pointer? (variation 87)
21. A student says 'segmentation faults' is not relevant to real projects. What is the best correction? (variation 89)
22. When working with C Programming, why would a developer use null terminator? (variation 106)
23. What is the most accurate beginner-level explanation of pass by pointer? (variation 97)
24. What is the most accurate beginner-level explanation of malloc? (variation 352)
25. Which statement best describes the stack in C Programming?
26. When working with C Programming, why would a developer use null terminator? (variation 96)
27. When working with C Programming, why would a developer use null terminator? (variation 86)
28. Which option is a correct use case for structs in C Programming? (variation 103)
29. Which statement best describes the stack in C Programming? (variation 105)
30. Which statement best describes the stack in C Programming? (variation 75)
31. A student says 'segmentation faults' is not relevant to real projects. What is the best correction? (variation 109)
32. Which option is a correct use case for structs in C Programming? (variation 353)
33. Which option is a correct use case for structs in C Programming? (variation 73)
34. Which statement best describes pointers in C Programming? (variation 70)
35. When working with C Programming, why would a developer use null terminator? (variation 356)
36. A student says 'header files' is not relevant to real projects. What is the best correction? (variation 84)

37. Which option is a correct use case for preprocessor macros in C Programming? (variation 98)
38. A student says 'header files' is not relevant to real projects. What is the best correction? (variation 74)
39. When working with C Programming, why would a developer use arrays?
40. Which statement best describes pointers in C Programming?
41. Which statement best describes the stack in C Programming? (variation 355)
42. Which statement best describes the stack in C Programming? (variation 85)
43. Which option is a correct use case for structs in C Programming?
44. A student says 'segmentation faults' is not relevant to real projects. What is the best correction? (variation 359)
45. A student says 'segmentation faults' is not relevant to real projects. What is the best correction? (variation 79)
46. Which option is a correct use case for structs in C Programming? (variation 83)
47. Which statement best describes pointers in C Programming? (variation 350)
48. Which option is a correct use case for preprocessor macros in C Programming? (variation 78)
49. What is the most accurate beginner-level explanation of pass by pointer? (variation 77)
50. A student says 'segmentation faults' is not relevant to real projects. What is the best correction?
51. A student says 'segmentation faults' is not relevant to real projects. What is the best correction? (variation 99)
52. When working with C Programming, why would a developer use arrays? (variation 351)
53. A student says 'header files' is not relevant to real projects. What is the best correction? (variation 94)
54. What is the most accurate beginner-level explanation of pass by pointer?
55. Which statement best describes pointers in C Programming? (variation 100)

56. What is the most accurate beginner-level explanation of pass by pointer? (variation 107)

57. When working with C Programming, why would a developer use arrays? (variation 81)

58. When working with C Programming, why would a developer use null terminator? (variation 76)

59. When working with C Programming, why would a developer use arrays? (variation 101)

60. What is the most accurate beginner-level explanation of malloc? (variation 92)
