

CBSE Previous Year Practice 2017 (2017)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of labels?
2. When working with Machine Learning, why would a developer use train-test split? (variation 86)
3. Which statement best describes training data in Machine Learning? (variation 100)
4. Which option is a correct use case for regression in Machine Learning? (variation 103)
5. What is the most accurate beginner-level explanation of labels? (variation 102)
6. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
7. Which statement best describes overfitting in Machine Learning? (variation 85)
8. Which statement best describes training data in Machine Learning? (variation 80)
9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
10. Which option is a correct use case for confusion matrix in Machine Learning?
11. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
12. Which statement best describes overfitting in Machine Learning? (variation 95)
13. When working with Machine Learning, why would a developer use features? (variation 101)
14. When working with Machine Learning, why would a developer use train-test split?
15. Which option is a correct use case for regression in Machine Learning? (variation 353)
16. What is the most accurate beginner-level explanation of labels? (variation 92)
17. Which statement best describes training data in Machine Learning? (variation 90)

18. What is the most accurate beginner-level explanation of accuracy? (variation 97)
19. When working with Machine Learning, why would a developer use features? (variation 71)
20. What is the most accurate beginner-level explanation of labels? (variation 352)
21. What is the most accurate beginner-level explanation of accuracy? (variation 357)
22. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
23. Which statement best describes overfitting in Machine Learning?
24. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
25. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
26. A student says 'classification' is not relevant to real projects. What is the best correction?
27. Which option is a correct use case for regression in Machine Learning? (variation 83)
28. Which statement best describes overfitting in Machine Learning? (variation 355)
29. What is the most accurate beginner-level explanation of accuracy? (variation 87)
30. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
31. Which option is a correct use case for regression in Machine Learning? (variation 93)
32. Which statement best describes overfitting in Machine Learning? (variation 105)
33. When working with Machine Learning, why would a developer use train-test split? (variation 96)
34. When working with Machine Learning, why would a developer use features? (variation 91)
35. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
36. When working with Machine Learning, why would a developer use train-test split? (variation 356)

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
38. When working with Machine Learning, why would a developer use train-test split? (variation 76)
39. Which statement best describes training data in Machine Learning? (variation 350)
40. What is the most accurate beginner-level explanation of accuracy?
41. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
42. What is the most accurate beginner-level explanation of labels? (variation 72)
43. When working with Machine Learning, why would a developer use features?
44. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
45. What is the most accurate beginner-level explanation of accuracy? (variation 107)
46. When working with Machine Learning, why would a developer use train-test split? (variation 106)
47. When working with Machine Learning, why would a developer use features? (variation 351)
48. Which statement best describes training data in Machine Learning?
49. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
50. Which option is a correct use case for regression in Machine Learning?
51. Which statement best describes training data in Machine Learning? (variation 70)
52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
53. What is the most accurate beginner-level explanation of accuracy? (variation 77)
54. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
55. Which statement best describes overfitting in Machine Learning? (variation 75)

56. Which option is a correct use case for regression in Machine Learning? (variation 73)

57. When working with Machine Learning, why would a developer use features? (variation 81)

58. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

59. What is the most accurate beginner-level explanation of labels? (variation 82)

60. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
