

# CBSE Previous Year Practice 2020 (2020)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
2. What is the most accurate beginner-level explanation of labels? (variation 92)
3. A student says 'classification' is not relevant to real projects. What is the best correction?
4. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
5. What is the most accurate beginner-level explanation of accuracy?
6. What is the most accurate beginner-level explanation of accuracy? (variation 77)
7. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
8. Which statement best describes training data in Machine Learning? (variation 350)
9. When working with Machine Learning, why would a developer use features? (variation 351)
10. Which option is a correct use case for confusion matrix in Machine Learning?
11. Which statement best describes training data in Machine Learning? (variation 80)
12. Which statement best describes training data in Machine Learning?
13. Which option is a correct use case for regression in Machine Learning? (variation 83)
14. Which statement best describes overfitting in Machine Learning? (variation 355)
15. Which option is a correct use case for regression in Machine Learning? (variation 93)
16. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
17. Which statement best describes overfitting in Machine Learning? (variation 95)

18. Which option is a correct use case for regression in Machine Learning? (variation 73)
19. When working with Machine Learning, why would a developer use train-test split? (variation 96)
20. What is the most accurate beginner-level explanation of labels? (variation 82)
21. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
22. What is the most accurate beginner-level explanation of accuracy? (variation 97)
23. When working with Machine Learning, why would a developer use train-test split? (variation 106)
24. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
25. What is the most accurate beginner-level explanation of labels? (variation 72)
26. When working with Machine Learning, why would a developer use features? (variation 81)
27. When working with Machine Learning, why would a developer use train-test split? (variation 86)
28. Which statement best describes overfitting in Machine Learning? (variation 105)
29. Which option is a correct use case for regression in Machine Learning?
30. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
31. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
32. What is the most accurate beginner-level explanation of accuracy? (variation 107)
33. When working with Machine Learning, why would a developer use train-test split? (variation 356)
34. When working with Machine Learning, why would a developer use train-test split? (variation 76)
35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

37. Which option is a correct use case for regression in Machine Learning? (variation 353)
38. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
40. When working with Machine Learning, why would a developer use features?
41. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
42. Which statement best describes overfitting in Machine Learning?
43. When working with Machine Learning, why would a developer use features? (variation 91)
44. Which statement best describes overfitting in Machine Learning? (variation 85)
45. Which statement best describes training data in Machine Learning? (variation 90)
46. When working with Machine Learning, why would a developer use features? (variation 71)
47. Which option is a correct use case for regression in Machine Learning? (variation 103)
48. What is the most accurate beginner-level explanation of labels?
49. What is the most accurate beginner-level explanation of labels? (variation 352)
50. Which statement best describes training data in Machine Learning? (variation 70)
51. When working with Machine Learning, why would a developer use features? (variation 101)
52. What is the most accurate beginner-level explanation of accuracy? (variation 87)
53. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
54. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
55. What is the most accurate beginner-level explanation of labels? (variation 102)

56. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

57. What is the most accurate beginner-level explanation of accuracy? (variation 357)

58. Which statement best describes training data in Machine Learning? (variation 100)

59. Which statement best describes overfitting in Machine Learning? (variation 75)

60. When working with Machine Learning, why would a developer use train-test split?
