

CBSE Previous Year Practice 2021 (2021)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for regression in Machine Learning? (variation 353)
2. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
3. What is the most accurate beginner-level explanation of accuracy?
4. What is the most accurate beginner-level explanation of accuracy? (variation 107)
5. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
6. When working with Machine Learning, why would a developer use train-test split? (variation 356)
7. Which option is a correct use case for regression in Machine Learning?
8. Which statement best describes overfitting in Machine Learning? (variation 105)
9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
10. What is the most accurate beginner-level explanation of accuracy? (variation 77)
11. Which option is a correct use case for confusion matrix in Machine Learning?
12. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
14. When working with Machine Learning, why would a developer use features? (variation 351)
15. What is the most accurate beginner-level explanation of labels?
16. Which option is a correct use case for regression in Machine Learning? (variation 73)
17. Which statement best describes overfitting in Machine Learning? (variation 95)

18. When working with Machine Learning, why would a developer use features? (variation 71)
19. What is the most accurate beginner-level explanation of labels? (variation 92)
20. What is the most accurate beginner-level explanation of labels? (variation 352)
21. Which statement best describes overfitting in Machine Learning? (variation 355)
22. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
23. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
24. Which statement best describes training data in Machine Learning? (variation 80)
25. What is the most accurate beginner-level explanation of labels? (variation 72)
26. Which option is a correct use case for regression in Machine Learning? (variation 103)
27. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
28. What is the most accurate beginner-level explanation of labels? (variation 102)
29. When working with Machine Learning, why would a developer use features? (variation 101)
30. Which statement best describes training data in Machine Learning? (variation 100)
31. When working with Machine Learning, why would a developer use features? (variation 81)
32. A student says 'classification' is not relevant to real projects. What is the best correction?
33. Which statement best describes overfitting in Machine Learning? (variation 85)
34. Which statement best describes training data in Machine Learning?
35. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
36. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

37. Which statement best describes training data in Machine Learning? (variation 70)
38. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
39. What is the most accurate beginner-level explanation of accuracy? (variation 357)
40. When working with Machine Learning, why would a developer use train-test split? (variation 106)
41. Which statement best describes training data in Machine Learning? (variation 350)
42. When working with Machine Learning, why would a developer use train-test split? (variation 96)
43. When working with Machine Learning, why would a developer use features?
44. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
45. When working with Machine Learning, why would a developer use train-test split?
46. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
47. Which statement best describes overfitting in Machine Learning?
48. When working with Machine Learning, why would a developer use train-test split? (variation 86)
49. Which statement best describes overfitting in Machine Learning? (variation 75)
50. Which option is a correct use case for regression in Machine Learning? (variation 83)
51. When working with Machine Learning, why would a developer use features? (variation 91)
52. Which option is a correct use case for regression in Machine Learning? (variation 93)
53. When working with Machine Learning, why would a developer use train-test split? (variation 76)
54. Which statement best describes training data in Machine Learning? (variation 90)
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

56. What is the most accurate beginner-level explanation of labels? (variation 82)

57. What is the most accurate beginner-level explanation of accuracy? (variation 87)

58. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

59. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

60. What is the most accurate beginner-level explanation of accuracy? (variation 97)
