

CBSE Previous Year Practice 2022 (2022)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
2. What is the most accurate beginner-level explanation of accuracy? (variation 87)
3. Which statement best describes training data in Machine Learning? (variation 350)
4. A student says 'classification' is not relevant to real projects. What is the best correction?
5. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
6. Which statement best describes training data in Machine Learning?
7. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
8. Which option is a correct use case for regression in Machine Learning? (variation 93)
9. What is the most accurate beginner-level explanation of labels? (variation 72)
10. What is the most accurate beginner-level explanation of labels? (variation 82)
11. Which option is a correct use case for regression in Machine Learning? (variation 103)
12. When working with Machine Learning, why would a developer use features? (variation 101)
13. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
14. Which option is a correct use case for regression in Machine Learning? (variation 73)
15. When working with Machine Learning, why would a developer use features? (variation 351)
16. When working with Machine Learning, why would a developer use features? (variation 71)
17. Which statement best describes overfitting in Machine Learning? (variation 105)

18. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
19. What is the most accurate beginner-level explanation of labels? (variation 352)
20. When working with Machine Learning, why would a developer use train-test split? (variation 356)
21. What is the most accurate beginner-level explanation of labels?
22. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
23. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
24. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
25. What is the most accurate beginner-level explanation of accuracy? (variation 97)
26. Which statement best describes overfitting in Machine Learning?
27. Which statement best describes overfitting in Machine Learning? (variation 85)
28. Which statement best describes training data in Machine Learning? (variation 100)
29. What is the most accurate beginner-level explanation of accuracy? (variation 77)
30. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
31. What is the most accurate beginner-level explanation of accuracy? (variation 107)
32. Which statement best describes overfitting in Machine Learning? (variation 355)
33. Which option is a correct use case for regression in Machine Learning? (variation 83)
34. When working with Machine Learning, why would a developer use train-test split? (variation 106)
35. When working with Machine Learning, why would a developer use train-test split? (variation 86)
36. When working with Machine Learning, why would a developer use features?

37. Which statement best describes overfitting in Machine Learning? (variation 75)
38. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
39. When working with Machine Learning, why would a developer use train-test split? (variation 76)
40. When working with Machine Learning, why would a developer use train-test split?
41. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
42. Which option is a correct use case for regression in Machine Learning?
43. Which statement best describes training data in Machine Learning? (variation 70)
44. Which statement best describes overfitting in Machine Learning? (variation 95)
45. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
46. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
47. What is the most accurate beginner-level explanation of accuracy? (variation 357)
48. Which statement best describes training data in Machine Learning? (variation 90)
49. When working with Machine Learning, why would a developer use features? (variation 81)
50. When working with Machine Learning, why would a developer use train-test split? (variation 96)
51. Which option is a correct use case for regression in Machine Learning? (variation 353)
52. What is the most accurate beginner-level explanation of labels? (variation 102)
53. What is the most accurate beginner-level explanation of labels? (variation 92)
54. What is the most accurate beginner-level explanation of accuracy?
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

56. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)

57. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

58. Which statement best describes training data in Machine Learning? (variation 80)

59. When working with Machine Learning, why would a developer use features? (variation 91)

60. Which option is a correct use case for confusion matrix in Machine Learning?
