

CBSE Previous Year Practice 2024 (2024)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 86)
2. What is the most accurate beginner-level explanation of labels? (variation 72)
3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
4. Which statement best describes overfitting in Machine Learning? (variation 105)
5. Which option is a correct use case for regression in Machine Learning? (variation 93)
6. When working with Machine Learning, why would a developer use features? (variation 351)
7. Which statement best describes training data in Machine Learning?
8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
9. A student says 'classification' is not relevant to real projects. What is the best correction?
10. Which option is a correct use case for confusion matrix in Machine Learning?
11. What is the most accurate beginner-level explanation of accuracy? (variation 107)
12. When working with Machine Learning, why would a developer use features? (variation 81)
13. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
14. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
15. When working with Machine Learning, why would a developer use train-test split? (variation 356)
16. When working with Machine Learning, why would a developer use train-test split?
17. Which option is a correct use case for regression in Machine Learning? (variation 83)

18. What is the most accurate beginner-level explanation of accuracy? (variation 97)
19. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
20. What is the most accurate beginner-level explanation of labels? (variation 82)
21. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
22. When working with Machine Learning, why would a developer use features? (variation 101)
23. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
24. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
25. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
26. Which statement best describes training data in Machine Learning? (variation 350)
27. What is the most accurate beginner-level explanation of labels? (variation 102)
28. When working with Machine Learning, why would a developer use train-test split? (variation 96)
29. Which statement best describes training data in Machine Learning? (variation 80)
30. What is the most accurate beginner-level explanation of labels? (variation 352)
31. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
32. Which statement best describes overfitting in Machine Learning? (variation 85)
33. Which statement best describes training data in Machine Learning? (variation 100)
34. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
35. Which option is a correct use case for regression in Machine Learning? (variation 103)
36. What is the most accurate beginner-level explanation of accuracy? (variation 77)

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
38. What is the most accurate beginner-level explanation of accuracy?
39. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
40. Which statement best describes overfitting in Machine Learning? (variation 95)
41. What is the most accurate beginner-level explanation of labels?
42. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
43. Which option is a correct use case for regression in Machine Learning?
44. What is the most accurate beginner-level explanation of labels? (variation 92)
45. Which option is a correct use case for regression in Machine Learning? (variation 353)
46. When working with Machine Learning, why would a developer use train-test split? (variation 106)
47. Which statement best describes overfitting in Machine Learning?
48. Which option is a correct use case for regression in Machine Learning? (variation 73)
49. What is the most accurate beginner-level explanation of accuracy? (variation 357)
50. Which statement best describes overfitting in Machine Learning? (variation 75)
51. When working with Machine Learning, why would a developer use train-test split? (variation 76)
52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
53. What is the most accurate beginner-level explanation of accuracy? (variation 87)
54. Which statement best describes overfitting in Machine Learning? (variation 355)
55. When working with Machine Learning, why would a developer use features? (variation 91)

56. Which statement best describes training data in Machine Learning? (variation 90)

57. When working with Machine Learning, why would a developer use features? (variation 71)

58. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

59. Which statement best describes training data in Machine Learning? (variation 70)

60. When working with Machine Learning, why would a developer use features?
