

ICSE Previous Year Practice 2017 (2017)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of labels? (variation 72)
2. Which option is a correct use case for regression in Machine Learning? (variation 93)
3. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
4. Which statement best describes overfitting in Machine Learning? (variation 75)
5. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
6. When working with Machine Learning, why would a developer use features?
7. Which option is a correct use case for regression in Machine Learning? (variation 73)
8. What is the most accurate beginner-level explanation of labels? (variation 92)
9. Which statement best describes training data in Machine Learning? (variation 100)
10. Which statement best describes training data in Machine Learning? (variation 90)
11. When working with Machine Learning, why would a developer use train-test split? (variation 86)
12. Which statement best describes overfitting in Machine Learning? (variation 105)
13. When working with Machine Learning, why would a developer use train-test split? (variation 106)
14. Which statement best describes training data in Machine Learning?
15. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
16. Which option is a correct use case for regression in Machine Learning? (variation 353)
17. Which statement best describes training data in Machine Learning? (variation 80)

18. What is the most accurate beginner-level explanation of labels? (variation 102)
19. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
20. Which statement best describes training data in Machine Learning? (variation 350)
21. Which statement best describes overfitting in Machine Learning? (variation 85)
22. Which option is a correct use case for confusion matrix in Machine Learning?
23. Which statement best describes training data in Machine Learning? (variation 70)
24. What is the most accurate beginner-level explanation of accuracy? (variation 87)
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
26. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
27. Which option is a correct use case for regression in Machine Learning? (variation 83)
28. What is the most accurate beginner-level explanation of accuracy? (variation 357)
29. A student says 'classification' is not relevant to real projects. What is the best correction?
30. What is the most accurate beginner-level explanation of accuracy? (variation 107)
31. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
32. What is the most accurate beginner-level explanation of accuracy? (variation 77)
33. When working with Machine Learning, why would a developer use features? (variation 91)
34. What is the most accurate beginner-level explanation of labels? (variation 82)
35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

37. What is the most accurate beginner-level explanation of labels?
38. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
39. When working with Machine Learning, why would a developer use train-test split? (variation 76)
40. When working with Machine Learning, why would a developer use features? (variation 351)
41. When working with Machine Learning, why would a developer use features? (variation 81)
42. When working with Machine Learning, why would a developer use features? (variation 71)
43. When working with Machine Learning, why would a developer use train-test split? (variation 356)
44. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
45. Which statement best describes overfitting in Machine Learning? (variation 355)
46. When working with Machine Learning, why would a developer use train-test split?
47. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
48. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
49. Which statement best describes overfitting in Machine Learning? (variation 95)
50. When working with Machine Learning, why would a developer use train-test split? (variation 96)
51. What is the most accurate beginner-level explanation of accuracy?
52. What is the most accurate beginner-level explanation of labels? (variation 352)
53. What is the most accurate beginner-level explanation of accuracy? (variation 97)
54. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
55. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)

57. Which option is a correct use case for regression in Machine Learning?

58. Which option is a correct use case for regression in Machine Learning? (variation 103)

59. When working with Machine Learning, why would a developer use features? (variation 101)

60. Which statement best describes overfitting in Machine Learning?
