

ICSE Previous Year Practice 2018 (2018)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use features?
2. What is the most accurate beginner-level explanation of accuracy? (variation 87)
3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
4. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
5. Which statement best describes training data in Machine Learning? (variation 80)
6. Which statement best describes overfitting in Machine Learning? (variation 105)
7. What is the most accurate beginner-level explanation of accuracy?
8. Which option is a correct use case for regression in Machine Learning? (variation 103)
9. Which statement best describes overfitting in Machine Learning? (variation 95)
10. Which statement best describes training data in Machine Learning?
11. What is the most accurate beginner-level explanation of accuracy? (variation 107)
12. When working with Machine Learning, why would a developer use train-test split? (variation 86)
13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
14. What is the most accurate beginner-level explanation of labels? (variation 82)
15. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
16. Which statement best describes overfitting in Machine Learning?
17. When working with Machine Learning, why would a developer use features? (variation 81)

18. Which option is a correct use case for regression in Machine Learning? (variation 83)
19. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
20. What is the most accurate beginner-level explanation of labels? (variation 102)
21. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
22. Which statement best describes training data in Machine Learning? (variation 90)
23. Which option is a correct use case for confusion matrix in Machine Learning?
24. When working with Machine Learning, why would a developer use features? (variation 91)
25. A student says 'classification' is not relevant to real projects. What is the best correction?
26. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
27. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
28. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
29. When working with Machine Learning, why would a developer use train-test split? (variation 96)
30. When working with Machine Learning, why would a developer use train-test split? (variation 76)
31. What is the most accurate beginner-level explanation of labels? (variation 92)
32. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
33. When working with Machine Learning, why would a developer use features? (variation 101)
34. Which statement best describes training data in Machine Learning? (variation 350)
35. What is the most accurate beginner-level explanation of accuracy? (variation 357)
36. When working with Machine Learning, why would a developer use features? (variation 351)

37. What is the most accurate beginner-level explanation of labels? (variation 352)
38. What is the most accurate beginner-level explanation of accuracy? (variation 77)
39. When working with Machine Learning, why would a developer use train-test split? (variation 356)
40. Which statement best describes training data in Machine Learning? (variation 70)
41. What is the most accurate beginner-level explanation of accuracy? (variation 97)
42. When working with Machine Learning, why would a developer use train-test split? (variation 106)
43. When working with Machine Learning, why would a developer use features? (variation 71)
44. Which statement best describes training data in Machine Learning? (variation 100)
45. Which statement best describes overfitting in Machine Learning? (variation 85)
46. What is the most accurate beginner-level explanation of labels? (variation 72)
47. Which statement best describes overfitting in Machine Learning? (variation 355)
48. Which option is a correct use case for regression in Machine Learning? (variation 93)
49. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
50. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
51. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
52. Which option is a correct use case for regression in Machine Learning? (variation 73)
53. Which option is a correct use case for regression in Machine Learning?
54. What is the most accurate beginner-level explanation of labels?
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

56. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

57. Which statement best describes overfitting in Machine Learning? (variation 75)

58. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

59. Which option is a correct use case for regression in Machine Learning? (variation 353)

60. When working with Machine Learning, why would a developer use train-test split?
