

ICSE Previous Year Practice 2023 (2023)

Subject: General | Topic: Machine Learning

1. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
2. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
3. Which option is a correct use case for regression in Machine Learning? (variation 73)
4. When working with Machine Learning, why would a developer use features? (variation 351)
5. Which statement best describes training data in Machine Learning? (variation 350)
6. Which statement best describes training data in Machine Learning? (variation 70)
7. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
8. Which statement best describes overfitting in Machine Learning? (variation 95)
9. What is the most accurate beginner-level explanation of labels? (variation 102)
10. Which statement best describes overfitting in Machine Learning? (variation 105)
11. Which option is a correct use case for confusion matrix in Machine Learning?
12. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
13. Which statement best describes overfitting in Machine Learning?
14. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
15. What is the most accurate beginner-level explanation of accuracy? (variation 357)
16. When working with Machine Learning, why would a developer use train-test split? (variation 76)
17. What is the most accurate beginner-level explanation of labels? (variation 92)

18. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
19. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
20. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
21. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
22. When working with Machine Learning, why would a developer use features?
23. Which statement best describes training data in Machine Learning? (variation 80)
24. What is the most accurate beginner-level explanation of accuracy? (variation 87)
25. Which option is a correct use case for regression in Machine Learning?
26. Which option is a correct use case for regression in Machine Learning? (variation 353)
27. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
28. Which option is a correct use case for regression in Machine Learning? (variation 93)
29. When working with Machine Learning, why would a developer use train-test split? (variation 356)
30. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
31. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
32. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
33. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
34. Which option is a correct use case for regression in Machine Learning? (variation 103)
35. What is the most accurate beginner-level explanation of accuracy? (variation 77)
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

37. Which statement best describes training data in Machine Learning? (variation 90)
38. What is the most accurate beginner-level explanation of accuracy? (variation 97)
39. Which statement best describes overfitting in Machine Learning? (variation 75)
40. Which statement best describes overfitting in Machine Learning? (variation 355)
41. What is the most accurate beginner-level explanation of accuracy? (variation 107)
42. Which option is a correct use case for regression in Machine Learning? (variation 83)
43. When working with Machine Learning, why would a developer use features? (variation 71)
44. When working with Machine Learning, why would a developer use train-test split? (variation 96)
45. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
46. When working with Machine Learning, why would a developer use train-test split? (variation 106)
47. What is the most accurate beginner-level explanation of labels? (variation 72)
48. Which statement best describes training data in Machine Learning?
49. When working with Machine Learning, why would a developer use features? (variation 81)
50. What is the most accurate beginner-level explanation of labels?
51. Which statement best describes training data in Machine Learning? (variation 100)
52. What is the most accurate beginner-level explanation of labels? (variation 82)
53. When working with Machine Learning, why would a developer use train-test split?
54. What is the most accurate beginner-level explanation of accuracy?
55. Which statement best describes overfitting in Machine Learning? (variation 85)

56. When working with Machine Learning, why would a developer use features? (variation 101)

57. What is the most accurate beginner-level explanation of labels? (variation 352)

58. A student says 'classification' is not relevant to real projects. What is the best correction?

59. When working with Machine Learning, why would a developer use train-test split? (variation 86)

60. When working with Machine Learning, why would a developer use features? (variation 91)
