

ICSE Previous Year Practice 2024 (2024)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 356)
2. Which statement best describes training data in Machine Learning? (variation 70)
3. Which statement best describes overfitting in Machine Learning? (variation 105)
4. When working with Machine Learning, why would a developer use train-test split? (variation 76)
5. What is the most accurate beginner-level explanation of labels? (variation 352)
6. What is the most accurate beginner-level explanation of labels? (variation 82)
7. Which option is a correct use case for regression in Machine Learning? (variation 353)
8. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
9. Which statement best describes training data in Machine Learning? (variation 100)
10. Which statement best describes training data in Machine Learning? (variation 80)
11. Which option is a correct use case for regression in Machine Learning? (variation 103)
12. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
13. Which statement best describes overfitting in Machine Learning? (variation 85)
14. What is the most accurate beginner-level explanation of labels?
15. When working with Machine Learning, why would a developer use features? (variation 91)
16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
17. Which statement best describes training data in Machine Learning?

18. Which statement best describes overfitting in Machine Learning? (variation 75)
19. A student says 'classification' is not relevant to real projects. What is the best correction?
20. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
21. What is the most accurate beginner-level explanation of accuracy? (variation 87)
22. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
23. When working with Machine Learning, why would a developer use train-test split? (variation 106)
24. What is the most accurate beginner-level explanation of accuracy? (variation 77)
25. Which option is a correct use case for regression in Machine Learning? (variation 73)
26. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
27. When working with Machine Learning, why would a developer use features?
28. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
29. What is the most accurate beginner-level explanation of labels? (variation 72)
30. Which statement best describes training data in Machine Learning? (variation 350)
31. What is the most accurate beginner-level explanation of labels? (variation 92)
32. When working with Machine Learning, why would a developer use features? (variation 81)
33. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
34. Which option is a correct use case for regression in Machine Learning? (variation 93)
35. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

37. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
38. When working with Machine Learning, why would a developer use train-test split? (variation 86)
39. Which statement best describes overfitting in Machine Learning? (variation 95)
40. What is the most accurate beginner-level explanation of accuracy? (variation 107)
41. When working with Machine Learning, why would a developer use features? (variation 101)
42. When working with Machine Learning, why would a developer use features? (variation 71)
43. What is the most accurate beginner-level explanation of labels? (variation 102)
44. What is the most accurate beginner-level explanation of accuracy? (variation 97)
45. When working with Machine Learning, why would a developer use train-test split?
46. When working with Machine Learning, why would a developer use features? (variation 351)
47. What is the most accurate beginner-level explanation of accuracy? (variation 357)
48. What is the most accurate beginner-level explanation of accuracy?
49. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
50. When working with Machine Learning, why would a developer use train-test split? (variation 96)
51. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
53. Which option is a correct use case for confusion matrix in Machine Learning?
54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
55. Which option is a correct use case for regression in Machine Learning? (variation 83)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

57. Which statement best describes training data in Machine Learning? (variation 90)

58. Which option is a correct use case for regression in Machine Learning?

59. Which statement best describes overfitting in Machine Learning?

60. Which statement best describes overfitting in Machine Learning? (variation 355)
