

ICSE Previous Year Practice 2025 (2025)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 76)
2. Which statement best describes overfitting in Machine Learning? (variation 75)
3. When working with Machine Learning, why would a developer use features?
4. What is the most accurate beginner-level explanation of labels? (variation 102)
5. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
6. When working with Machine Learning, why would a developer use features? (variation 91)
7. What is the most accurate beginner-level explanation of accuracy?
8. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
9. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
10. What is the most accurate beginner-level explanation of labels?
11. When working with Machine Learning, why would a developer use features? (variation 351)
12. When working with Machine Learning, why would a developer use train-test split? (variation 96)
13. When working with Machine Learning, why would a developer use features? (variation 81)
14. Which statement best describes training data in Machine Learning? (variation 70)
15. What is the most accurate beginner-level explanation of accuracy? (variation 357)
16. What is the most accurate beginner-level explanation of labels? (variation 72)
17. What is the most accurate beginner-level explanation of accuracy? (variation 107)

18. What is the most accurate beginner-level explanation of accuracy? (variation 87)
19. Which statement best describes overfitting in Machine Learning? (variation 85)
20. Which statement best describes training data in Machine Learning?
21. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
22. Which statement best describes training data in Machine Learning? (variation 350)
23. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
24. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
25. When working with Machine Learning, why would a developer use features? (variation 71)
26. Which statement best describes training data in Machine Learning? (variation 90)
27. What is the most accurate beginner-level explanation of labels? (variation 352)
28. Which statement best describes training data in Machine Learning? (variation 100)
29. Which option is a correct use case for regression in Machine Learning? (variation 103)
30. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
31. Which statement best describes overfitting in Machine Learning?
32. Which option is a correct use case for confusion matrix in Machine Learning?
33. What is the most accurate beginner-level explanation of accuracy? (variation 77)
34. Which option is a correct use case for regression in Machine Learning? (variation 353)
35. Which option is a correct use case for regression in Machine Learning? (variation 73)
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

37. When working with Machine Learning, why would a developer use features? (variation 101)
38. Which option is a correct use case for regression in Machine Learning? (variation 83)
39. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
40. When working with Machine Learning, why would a developer use train-test split? (variation 106)
41. Which option is a correct use case for regression in Machine Learning?
42. Which statement best describes overfitting in Machine Learning? (variation 95)
43. When working with Machine Learning, why would a developer use train-test split?
44. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
45. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
46. What is the most accurate beginner-level explanation of labels? (variation 82)
47. Which statement best describes overfitting in Machine Learning? (variation 105)
48. When working with Machine Learning, why would a developer use train-test split? (variation 86)
49. What is the most accurate beginner-level explanation of labels? (variation 92)
50. A student says 'classification' is not relevant to real projects. What is the best correction?
51. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
52. What is the most accurate beginner-level explanation of accuracy? (variation 97)
53. Which statement best describes training data in Machine Learning? (variation 80)
54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
55. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

56. Which statement best describes overfitting in Machine Learning? (variation 355)

57. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

58. Which option is a correct use case for regression in Machine Learning? (variation 93)

59. When working with Machine Learning, why would a developer use train-test split? (variation 356)

60. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
