

ICSE Previous Year Practice 2026 (2026)

Subject: General | Topic: Machine Learning

1. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
2. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
3. When working with Machine Learning, why would a developer use train-test split? (variation 356)
4. What is the most accurate beginner-level explanation of accuracy?
5. A student says 'classification' is not relevant to real projects. What is the best correction?
6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
7. What is the most accurate beginner-level explanation of labels? (variation 72)
8. When working with Machine Learning, why would a developer use features? (variation 81)
9. What is the most accurate beginner-level explanation of accuracy? (variation 357)
10. Which statement best describes overfitting in Machine Learning? (variation 75)
11. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
12. Which statement best describes training data in Machine Learning? (variation 350)
13. Which statement best describes overfitting in Machine Learning? (variation 105)
14. Which option is a correct use case for regression in Machine Learning? (variation 353)
15. What is the most accurate beginner-level explanation of accuracy? (variation 97)
16. Which option is a correct use case for regression in Machine Learning? (variation 93)
17. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

18. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
19. Which statement best describes overfitting in Machine Learning? (variation 95)
20. Which statement best describes training data in Machine Learning? (variation 70)
21. What is the most accurate beginner-level explanation of labels? (variation 92)
22. Which option is a correct use case for regression in Machine Learning? (variation 103)
23. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
24. When working with Machine Learning, why would a developer use features? (variation 71)
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
26. Which option is a correct use case for confusion matrix in Machine Learning?
27. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
28. Which statement best describes overfitting in Machine Learning?
29. Which statement best describes training data in Machine Learning? (variation 100)
30. When working with Machine Learning, why would a developer use train-test split?
31. Which statement best describes training data in Machine Learning?
32. When working with Machine Learning, why would a developer use features? (variation 101)
33. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
34. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
35. Which statement best describes training data in Machine Learning? (variation 80)
36. Which statement best describes training data in Machine Learning? (variation 90)

37. What is the most accurate beginner-level explanation of accuracy? (variation 77)
38. What is the most accurate beginner-level explanation of labels?
39. What is the most accurate beginner-level explanation of accuracy? (variation 107)
40. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
41. When working with Machine Learning, why would a developer use train-test split? (variation 96)
42. When working with Machine Learning, why would a developer use train-test split? (variation 86)
43. When working with Machine Learning, why would a developer use train-test split? (variation 106)
44. Which option is a correct use case for regression in Machine Learning? (variation 73)
45. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
46. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
47. When working with Machine Learning, why would a developer use features?
48. What is the most accurate beginner-level explanation of accuracy? (variation 87)
49. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
50. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
51. What is the most accurate beginner-level explanation of labels? (variation 82)
52. What is the most accurate beginner-level explanation of labels? (variation 352)
53. Which statement best describes overfitting in Machine Learning? (variation 85)
54. Which option is a correct use case for regression in Machine Learning? (variation 83)
55. When working with Machine Learning, why would a developer use features? (variation 91)

56. Which option is a correct use case for regression in Machine Learning?
57. When working with Machine Learning, why would a developer use train-test split? (variation 76)
58. When working with Machine Learning, why would a developer use features? (variation 351)
59. Which statement best describes overfitting in Machine Learning? (variation 355)
60. What is the most accurate beginner-level explanation of labels? (variation 102)
