

# State Board Previous Year Practice 2018 (2018)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning? (variation 85)
2. Which option is a correct use case for regression in Machine Learning? (variation 73)
3. Which statement best describes overfitting in Machine Learning? (variation 75)
4. When working with Machine Learning, why would a developer use train-test split? (variation 96)
5. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
6. What is the most accurate beginner-level explanation of labels? (variation 352)
7. What is the most accurate beginner-level explanation of labels? (variation 82)
8. Which option is a correct use case for regression in Machine Learning? (variation 93)
9. Which option is a correct use case for regression in Machine Learning? (variation 83)
10. Which option is a correct use case for regression in Machine Learning? (variation 353)
11. Which option is a correct use case for confusion matrix in Machine Learning?
12. What is the most accurate beginner-level explanation of labels? (variation 92)
13. Which statement best describes training data in Machine Learning? (variation 90)
14. When working with Machine Learning, why would a developer use train-test split?
15. What is the most accurate beginner-level explanation of labels?
16. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
17. Which option is a correct use case for regression in Machine Learning? (variation 103)

18. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
19. Which statement best describes overfitting in Machine Learning? (variation 355)
20. What is the most accurate beginner-level explanation of accuracy? (variation 97)
21. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
22. What is the most accurate beginner-level explanation of labels? (variation 102)
23. Which statement best describes overfitting in Machine Learning? (variation 95)
24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
25. When working with Machine Learning, why would a developer use train-test split? (variation 76)
26. What is the most accurate beginner-level explanation of accuracy? (variation 87)
27. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
28. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
29. A student says 'classification' is not relevant to real projects. What is the best correction?
30. When working with Machine Learning, why would a developer use train-test split? (variation 356)
31. What is the most accurate beginner-level explanation of accuracy? (variation 77)
32. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
33. When working with Machine Learning, why would a developer use train-test split? (variation 106)
34. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
35. Which statement best describes training data in Machine Learning? (variation 70)
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

37. Which statement best describes overfitting in Machine Learning? (variation 105)
38. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
39. What is the most accurate beginner-level explanation of labels? (variation 72)
40. Which statement best describes overfitting in Machine Learning?
41. What is the most accurate beginner-level explanation of accuracy? (variation 357)
42. When working with Machine Learning, why would a developer use features? (variation 101)
43. Which statement best describes training data in Machine Learning? (variation 350)
44. What is the most accurate beginner-level explanation of accuracy? (variation 107)
45. When working with Machine Learning, why would a developer use features? (variation 81)
46. What is the most accurate beginner-level explanation of accuracy?
47. When working with Machine Learning, why would a developer use features? (variation 351)
48. Which statement best describes training data in Machine Learning? (variation 80)
49. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
50. When working with Machine Learning, why would a developer use features? (variation 91)
51. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
52. When working with Machine Learning, why would a developer use features? (variation 71)
53. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
54. When working with Machine Learning, why would a developer use features?
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

56. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)

57. Which statement best describes training data in Machine Learning? (variation 100)

58. When working with Machine Learning, why would a developer use train-test split? (variation 86)

59. Which option is a correct use case for regression in Machine Learning?

60. Which statement best describes training data in Machine Learning?
