

State Board Previous Year Practice 2019 (2019)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of labels? (variation 82)
2. When working with Machine Learning, why would a developer use train-test split? (variation 76)
3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
4. What is the most accurate beginner-level explanation of accuracy? (variation 87)
5. When working with Machine Learning, why would a developer use features?
6. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
7. Which statement best describes overfitting in Machine Learning? (variation 85)
8. What is the most accurate beginner-level explanation of labels? (variation 102)
9. What is the most accurate beginner-level explanation of labels? (variation 92)
10. Which option is a correct use case for regression in Machine Learning? (variation 353)
11. Which statement best describes overfitting in Machine Learning? (variation 95)
12. A student says 'classification' is not relevant to real projects. What is the best correction?
13. When working with Machine Learning, why would a developer use features? (variation 91)
14. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
15. Which option is a correct use case for regression in Machine Learning? (variation 73)
16. Which statement best describes training data in Machine Learning? (variation 100)
17. When working with Machine Learning, why would a developer use train-test split?

18. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
20. What is the most accurate beginner-level explanation of labels? (variation 72)
21. When working with Machine Learning, why would a developer use features? (variation 351)
22. When working with Machine Learning, why would a developer use train-test split? (variation 106)
23. Which option is a correct use case for regression in Machine Learning? (variation 93)
24. When working with Machine Learning, why would a developer use train-test split? (variation 86)
25. Which option is a correct use case for regression in Machine Learning?
26. What is the most accurate beginner-level explanation of accuracy? (variation 357)
27. When working with Machine Learning, why would a developer use train-test split? (variation 96)
28. What is the most accurate beginner-level explanation of accuracy?
29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
30. Which statement best describes overfitting in Machine Learning?
31. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
32. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
33. Which statement best describes overfitting in Machine Learning? (variation 105)
34. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
35. What is the most accurate beginner-level explanation of labels? (variation 352)
36. When working with Machine Learning, why would a developer use train-test split? (variation 356)

37. Which statement best describes overfitting in Machine Learning? (variation 355)
38. Which statement best describes training data in Machine Learning? (variation 350)
39. Which statement best describes overfitting in Machine Learning? (variation 75)
40. Which option is a correct use case for confusion matrix in Machine Learning?
41. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
42. What is the most accurate beginner-level explanation of labels?
43. Which statement best describes training data in Machine Learning? (variation 80)
44. Which statement best describes training data in Machine Learning? (variation 70)
45. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
46. What is the most accurate beginner-level explanation of accuracy? (variation 97)
47. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
48. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
49. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
50. Which option is a correct use case for regression in Machine Learning? (variation 83)
51. What is the most accurate beginner-level explanation of accuracy? (variation 107)
52. Which statement best describes training data in Machine Learning?
53. When working with Machine Learning, why would a developer use features? (variation 101)
54. Which option is a correct use case for regression in Machine Learning? (variation 103)
55. When working with Machine Learning, why would a developer use features? (variation 81)

56. Which statement best describes training data in Machine Learning? (variation 90)

57. When working with Machine Learning, why would a developer use features? (variation 71)

58. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

59. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)

60. What is the most accurate beginner-level explanation of accuracy? (variation 77)
