

State Board Previous Year Practice 2020 (2020)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use features?
2. Which statement best describes overfitting in Machine Learning? (variation 355)
3. What is the most accurate beginner-level explanation of accuracy?
4. Which statement best describes training data in Machine Learning?
5. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
7. Which statement best describes training data in Machine Learning? (variation 350)
8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
9. What is the most accurate beginner-level explanation of accuracy? (variation 87)
10. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
11. Which statement best describes overfitting in Machine Learning? (variation 85)
12. Which statement best describes overfitting in Machine Learning? (variation 95)
13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
14. What is the most accurate beginner-level explanation of labels? (variation 82)
15. When working with Machine Learning, why would a developer use train-test split? (variation 76)
16. When working with Machine Learning, why would a developer use features? (variation 351)
17. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

18. Which option is a correct use case for regression in Machine Learning? (variation 353)
19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
20. When working with Machine Learning, why would a developer use train-test split? (variation 96)
21. When working with Machine Learning, why would a developer use train-test split? (variation 86)
22. Which option is a correct use case for confusion matrix in Machine Learning?
23. When working with Machine Learning, why would a developer use train-test split?
24. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
25. Which option is a correct use case for regression in Machine Learning? (variation 73)
26. Which statement best describes overfitting in Machine Learning? (variation 75)
27. What is the most accurate beginner-level explanation of accuracy? (variation 107)
28. What is the most accurate beginner-level explanation of labels? (variation 92)
29. Which statement best describes training data in Machine Learning? (variation 100)
30. Which option is a correct use case for regression in Machine Learning? (variation 103)
31. When working with Machine Learning, why would a developer use train-test split? (variation 356)
32. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
33. Which statement best describes training data in Machine Learning? (variation 70)
34. Which statement best describes overfitting in Machine Learning? (variation 105)
35. Which statement best describes training data in Machine Learning? (variation 90)
36. Which statement best describes overfitting in Machine Learning?

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
38. When working with Machine Learning, why would a developer use train-test split? (variation 106)
39. When working with Machine Learning, why would a developer use features? (variation 81)
40. Which option is a correct use case for regression in Machine Learning? (variation 93)
41. What is the most accurate beginner-level explanation of accuracy? (variation 77)
42. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
43. What is the most accurate beginner-level explanation of labels? (variation 352)
44. What is the most accurate beginner-level explanation of accuracy? (variation 97)
45. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
46. What is the most accurate beginner-level explanation of labels? (variation 102)
47. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
48. Which option is a correct use case for regression in Machine Learning? (variation 83)
49. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
50. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
51. When working with Machine Learning, why would a developer use features? (variation 91)
52. When working with Machine Learning, why would a developer use features? (variation 101)
53. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
54. What is the most accurate beginner-level explanation of labels? (variation 72)
55. Which option is a correct use case for regression in Machine Learning?

56. When working with Machine Learning, why would a developer use features? (variation 71)

57. What is the most accurate beginner-level explanation of labels?

58. What is the most accurate beginner-level explanation of accuracy? (variation 357)

59. A student says 'classification' is not relevant to real projects. What is the best correction?

60. Which statement best describes training data in Machine Learning? (variation 80)
