

State Board Previous Year Practice 2023 (2023)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for regression in Machine Learning? (variation 353)
2. Which statement best describes training data in Machine Learning? (variation 350)
3. What is the most accurate beginner-level explanation of labels? (variation 102)
4. Which option is a correct use case for regression in Machine Learning? (variation 93)
5. Which option is a correct use case for regression in Machine Learning? (variation 73)
6. What is the most accurate beginner-level explanation of labels? (variation 352)
7. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
8. Which statement best describes overfitting in Machine Learning? (variation 75)
9. Which statement best describes training data in Machine Learning? (variation 80)
10. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
11. Which statement best describes training data in Machine Learning? (variation 90)
12. When working with Machine Learning, why would a developer use features? (variation 81)
13. What is the most accurate beginner-level explanation of labels? (variation 82)
14. Which option is a correct use case for regression in Machine Learning? (variation 103)
15. What is the most accurate beginner-level explanation of accuracy? (variation 97)
16. What is the most accurate beginner-level explanation of labels?
17. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

18. What is the most accurate beginner-level explanation of accuracy? (variation 77)
19. Which option is a correct use case for regression in Machine Learning?
20. When working with Machine Learning, why would a developer use train-test split? (variation 356)
21. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
22. Which statement best describes overfitting in Machine Learning? (variation 355)
23. When working with Machine Learning, why would a developer use train-test split? (variation 76)
24. When working with Machine Learning, why would a developer use features? (variation 351)
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
26. What is the most accurate beginner-level explanation of accuracy? (variation 357)
27. What is the most accurate beginner-level explanation of accuracy? (variation 107)
28. When working with Machine Learning, why would a developer use features? (variation 91)
29. When working with Machine Learning, why would a developer use train-test split? (variation 96)
30. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
31. Which statement best describes training data in Machine Learning?
32. What is the most accurate beginner-level explanation of labels? (variation 92)
33. Which statement best describes training data in Machine Learning? (variation 100)
34. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
35. Which option is a correct use case for confusion matrix in Machine Learning?
36. Which option is a correct use case for regression in Machine Learning? (variation 83)

37. When working with Machine Learning, why would a developer use train-test split? (variation 86)
38. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
39. Which statement best describes overfitting in Machine Learning?
40. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
41. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
42. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
43. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
44. Which statement best describes training data in Machine Learning? (variation 70)
45. When working with Machine Learning, why would a developer use train-test split? (variation 106)
46. When working with Machine Learning, why would a developer use features?
47. What is the most accurate beginner-level explanation of accuracy? (variation 87)
48. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
49. A student says 'classification' is not relevant to real projects. What is the best correction?
50. When working with Machine Learning, why would a developer use train-test split?
51. Which statement best describes overfitting in Machine Learning? (variation 105)
52. What is the most accurate beginner-level explanation of accuracy?
53. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
54. When working with Machine Learning, why would a developer use features? (variation 101)
55. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

56. Which statement best describes overfitting in Machine Learning? (variation 95)

57. Which statement best describes overfitting in Machine Learning? (variation 85)

58. What is the most accurate beginner-level explanation of labels? (variation 72)

59. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

60. When working with Machine Learning, why would a developer use features? (variation 71)
