

State Board Previous Year Practice 2024 (2024)

Subject: General | Topic: Machine Learning

1. Which statement best describes training data in Machine Learning? (variation 350)
2. Which statement best describes overfitting in Machine Learning? (variation 355)
3. What is the most accurate beginner-level explanation of accuracy? (variation 97)
4. When working with Machine Learning, why would a developer use features? (variation 71)
5. When working with Machine Learning, why would a developer use features? (variation 101)
6. What is the most accurate beginner-level explanation of accuracy? (variation 77)
7. Which statement best describes training data in Machine Learning? (variation 80)
8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
10. When working with Machine Learning, why would a developer use features?
11. Which option is a correct use case for regression in Machine Learning?
12. When working with Machine Learning, why would a developer use train-test split?
13. When working with Machine Learning, why would a developer use train-test split? (variation 86)
14. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
15. Which statement best describes overfitting in Machine Learning? (variation 75)
16. What is the most accurate beginner-level explanation of accuracy? (variation 87)
17. What is the most accurate beginner-level explanation of labels?

18. Which statement best describes overfitting in Machine Learning? (variation 105)
19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
20. Which option is a correct use case for regression in Machine Learning? (variation 353)
21. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
22. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
23. Which statement best describes training data in Machine Learning? (variation 100)
24. Which statement best describes overfitting in Machine Learning? (variation 95)
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
26. Which option is a correct use case for regression in Machine Learning? (variation 83)
27. When working with Machine Learning, why would a developer use train-test split? (variation 96)
28. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
29. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
30. When working with Machine Learning, why would a developer use train-test split? (variation 76)
31. When working with Machine Learning, why would a developer use features? (variation 91)
32. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
33. What is the most accurate beginner-level explanation of labels? (variation 72)
34. Which option is a correct use case for regression in Machine Learning? (variation 73)
35. What is the most accurate beginner-level explanation of labels? (variation 92)
36. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)

37. What is the most accurate beginner-level explanation of accuracy? (variation 357)
38. What is the most accurate beginner-level explanation of labels? (variation 352)
39. Which option is a correct use case for regression in Machine Learning? (variation 93)
40. When working with Machine Learning, why would a developer use features? (variation 81)
41. When working with Machine Learning, why would a developer use train-test split? (variation 106)
42. When working with Machine Learning, why would a developer use train-test split? (variation 356)
43. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
44. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
45. Which option is a correct use case for confusion matrix in Machine Learning?
46. What is the most accurate beginner-level explanation of accuracy?
47. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
48. Which statement best describes training data in Machine Learning? (variation 70)
49. What is the most accurate beginner-level explanation of labels? (variation 82)
50. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
51. A student says 'classification' is not relevant to real projects. What is the best correction?
52. Which statement best describes overfitting in Machine Learning? (variation 85)
53. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
54. When working with Machine Learning, why would a developer use features? (variation 351)
55. Which option is a correct use case for regression in Machine Learning? (variation 103)

56. Which statement best describes overfitting in Machine Learning?

57. Which statement best describes training data in Machine Learning? (variation 90)

58. What is the most accurate beginner-level explanation of accuracy? (variation 107)

59. What is the most accurate beginner-level explanation of labels? (variation 102)

60. Which statement best describes training data in Machine Learning?
