

State Board Previous Year Practice 2026 (2026)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
2. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
3. Which statement best describes overfitting in Machine Learning? (variation 355)
4. Which statement best describes overfitting in Machine Learning? (variation 95)
5. Which statement best describes training data in Machine Learning?
6. Which option is a correct use case for regression in Machine Learning? (variation 103)
7. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
10. When working with Machine Learning, why would a developer use train-test split?
11. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
12. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
13. Which statement best describes overfitting in Machine Learning? (variation 105)
14. Which statement best describes training data in Machine Learning? (variation 80)
15. What is the most accurate beginner-level explanation of labels? (variation 352)
16. Which statement best describes overfitting in Machine Learning? (variation 75)
17. Which statement best describes overfitting in Machine Learning? (variation 85)

18. Which option is a correct use case for regression in Machine Learning? (variation 83)
19. When working with Machine Learning, why would a developer use features?
20. When working with Machine Learning, why would a developer use features? (variation 91)
21. When working with Machine Learning, why would a developer use features? (variation 71)
22. What is the most accurate beginner-level explanation of accuracy? (variation 107)
23. Which option is a correct use case for regression in Machine Learning?
24. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
25. What is the most accurate beginner-level explanation of accuracy? (variation 87)
26. Which option is a correct use case for regression in Machine Learning? (variation 93)
27. What is the most accurate beginner-level explanation of accuracy? (variation 77)
28. Which option is a correct use case for regression in Machine Learning? (variation 353)
29. When working with Machine Learning, why would a developer use train-test split? (variation 76)
30. What is the most accurate beginner-level explanation of accuracy? (variation 357)
31. When working with Machine Learning, why would a developer use features? (variation 101)
32. Which option is a correct use case for regression in Machine Learning? (variation 73)
33. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
34. What is the most accurate beginner-level explanation of labels? (variation 82)
35. What is the most accurate beginner-level explanation of accuracy? (variation 97)
36. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

37. Which statement best describes overfitting in Machine Learning?
38. When working with Machine Learning, why would a developer use train-test split? (variation 96)
39. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
40. When working with Machine Learning, why would a developer use features? (variation 81)
41. Which option is a correct use case for confusion matrix in Machine Learning?
42. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
43. When working with Machine Learning, why would a developer use train-test split? (variation 86)
44. When working with Machine Learning, why would a developer use features? (variation 351)
45. What is the most accurate beginner-level explanation of labels? (variation 92)
46. Which statement best describes training data in Machine Learning? (variation 90)
47. What is the most accurate beginner-level explanation of labels? (variation 102)
48. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
49. What is the most accurate beginner-level explanation of labels? (variation 72)
50. Which statement best describes training data in Machine Learning? (variation 350)
51. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
52. When working with Machine Learning, why would a developer use train-test split? (variation 106)
53. When working with Machine Learning, why would a developer use train-test split? (variation 356)
54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
55. Which statement best describes training data in Machine Learning? (variation 100)

56. What is the most accurate beginner-level explanation of accuracy?

57. What is the most accurate beginner-level explanation of labels?

58. A student says 'classification' is not relevant to real projects. What is the best correction?

59. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

60. Which statement best describes training data in Machine Learning? (variation 70)
