

IIT-JEE Previous Year Practice 2017 (2017)

Subject: General | Topic: Machine Learning

1. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
2. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
4. Which statement best describes training data in Machine Learning?
5. When working with Machine Learning, why would a developer use train-test split? (variation 96)
6. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
7. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
8. What is the most accurate beginner-level explanation of labels? (variation 102)
9. Which statement best describes overfitting in Machine Learning? (variation 85)
10. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
11. Which option is a correct use case for regression in Machine Learning? (variation 353)
12. Which statement best describes overfitting in Machine Learning? (variation 95)
13. Which statement best describes overfitting in Machine Learning? (variation 105)
14. When working with Machine Learning, why would a developer use features? (variation 91)
15. What is the most accurate beginner-level explanation of accuracy? (variation 357)
16. What is the most accurate beginner-level explanation of labels? (variation 82)
17. When working with Machine Learning, why would a developer use features? (variation 351)

18. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
19. Which statement best describes overfitting in Machine Learning?
20. Which option is a correct use case for regression in Machine Learning? (variation 73)
21. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
22. Which option is a correct use case for regression in Machine Learning? (variation 103)
23. When working with Machine Learning, why would a developer use features? (variation 81)
24. When working with Machine Learning, why would a developer use train-test split? (variation 76)
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
26. A student says 'classification' is not relevant to real projects. What is the best correction?
27. What is the most accurate beginner-level explanation of accuracy? (variation 77)
28. Which option is a correct use case for regression in Machine Learning? (variation 93)
29. When working with Machine Learning, why would a developer use train-test split? (variation 106)
30. Which statement best describes training data in Machine Learning? (variation 90)
31. Which option is a correct use case for confusion matrix in Machine Learning?
32. Which statement best describes training data in Machine Learning? (variation 80)
33. What is the most accurate beginner-level explanation of labels? (variation 92)
34. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
35. Which statement best describes overfitting in Machine Learning? (variation 355)
36. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
38. Which statement best describes training data in Machine Learning? (variation 70)
39. What is the most accurate beginner-level explanation of accuracy?
40. When working with Machine Learning, why would a developer use features?
41. What is the most accurate beginner-level explanation of accuracy? (variation 97)
42. When working with Machine Learning, why would a developer use train-test split?
43. Which statement best describes training data in Machine Learning? (variation 100)
44. Which statement best describes overfitting in Machine Learning? (variation 75)
45. Which option is a correct use case for regression in Machine Learning?
46. Which statement best describes training data in Machine Learning? (variation 350)
47. What is the most accurate beginner-level explanation of accuracy? (variation 87)
48. What is the most accurate beginner-level explanation of labels? (variation 72)
49. Which option is a correct use case for regression in Machine Learning? (variation 83)
50. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
51. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
52. When working with Machine Learning, why would a developer use features? (variation 101)
53. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
54. When working with Machine Learning, why would a developer use train-test split? (variation 356)
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)

56. What is the most accurate beginner-level explanation of labels? (variation 352)
57. When working with Machine Learning, why would a developer use features? (variation 71)
58. What is the most accurate beginner-level explanation of accuracy? (variation 107)
59. When working with Machine Learning, why would a developer use train-test split? (variation 86)
60. What is the most accurate beginner-level explanation of labels?
