

IIT-JEE Previous Year Practice 2018 (2018)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 106)
2. When working with Machine Learning, why would a developer use features? (variation 351)
3. Which option is a correct use case for regression in Machine Learning? (variation 103)
4. When working with Machine Learning, why would a developer use train-test split? (variation 76)
5. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
6. A student says 'classification' is not relevant to real projects. What is the best correction?
7. What is the most accurate beginner-level explanation of accuracy? (variation 97)
8. Which option is a correct use case for regression in Machine Learning? (variation 93)
9. When working with Machine Learning, why would a developer use features? (variation 101)
10. When working with Machine Learning, why would a developer use train-test split?
11. Which statement best describes training data in Machine Learning? (variation 90)
12. When working with Machine Learning, why would a developer use train-test split? (variation 356)
13. Which statement best describes training data in Machine Learning? (variation 80)
14. Which statement best describes overfitting in Machine Learning? (variation 85)
15. When working with Machine Learning, why would a developer use train-test split? (variation 96)
16. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
17. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

18. Which statement best describes overfitting in Machine Learning? (variation 105)
19. What is the most accurate beginner-level explanation of labels? (variation 82)
20. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
21. Which statement best describes overfitting in Machine Learning? (variation 95)
22. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
23. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
24. Which statement best describes overfitting in Machine Learning?
25. Which option is a correct use case for regression in Machine Learning? (variation 73)
26. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
27. Which option is a correct use case for regression in Machine Learning? (variation 353)
28. Which statement best describes training data in Machine Learning? (variation 100)
29. What is the most accurate beginner-level explanation of accuracy?
30. What is the most accurate beginner-level explanation of accuracy? (variation 107)
31. Which statement best describes training data in Machine Learning?
32. What is the most accurate beginner-level explanation of labels? (variation 102)
33. What is the most accurate beginner-level explanation of labels? (variation 352)
34. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
35. Which statement best describes overfitting in Machine Learning? (variation 75)
36. When working with Machine Learning, why would a developer use features? (variation 91)

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
38. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
39. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
40. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
41. When working with Machine Learning, why would a developer use features?
42. Which statement best describes overfitting in Machine Learning? (variation 355)
43. What is the most accurate beginner-level explanation of labels? (variation 92)
44. What is the most accurate beginner-level explanation of accuracy? (variation 357)
45. When working with Machine Learning, why would a developer use features? (variation 81)
46. Which option is a correct use case for regression in Machine Learning?
47. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
48. Which option is a correct use case for confusion matrix in Machine Learning?
49. What is the most accurate beginner-level explanation of accuracy? (variation 77)
50. When working with Machine Learning, why would a developer use features? (variation 71)
51. What is the most accurate beginner-level explanation of labels? (variation 72)
52. Which option is a correct use case for regression in Machine Learning? (variation 83)
53. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
54. When working with Machine Learning, why would a developer use train-test split? (variation 86)
55. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

56. Which statement best describes training data in Machine Learning? (variation 350)

57. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

58. What is the most accurate beginner-level explanation of labels?

59. Which statement best describes training data in Machine Learning? (variation 70)

60. What is the most accurate beginner-level explanation of accuracy? (variation 87)
