

IIT-JEE Previous Year Practice 2020 (2020)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of accuracy? (variation 87)
2. When working with Machine Learning, why would a developer use features? (variation 351)
3. When working with Machine Learning, why would a developer use train-test split? (variation 96)
4. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
5. Which statement best describes training data in Machine Learning? (variation 350)
6. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
7. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
8. A student says 'classification' is not relevant to real projects. What is the best correction?
9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
10. Which statement best describes training data in Machine Learning? (variation 90)
11. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
12. What is the most accurate beginner-level explanation of accuracy? (variation 77)
13. What is the most accurate beginner-level explanation of labels?
14. Which statement best describes training data in Machine Learning? (variation 80)
15. Which statement best describes overfitting in Machine Learning? (variation 85)
16. When working with Machine Learning, why would a developer use train-test split? (variation 76)
17. Which statement best describes training data in Machine Learning? (variation 100)

18. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
19. When working with Machine Learning, why would a developer use train-test split? (variation 356)
20. What is the most accurate beginner-level explanation of labels? (variation 82)
21. Which statement best describes overfitting in Machine Learning?
22. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
23. What is the most accurate beginner-level explanation of labels? (variation 102)
24. Which statement best describes overfitting in Machine Learning? (variation 105)
25. Which statement best describes training data in Machine Learning? (variation 70)
26. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
27. Which option is a correct use case for regression in Machine Learning? (variation 103)
28. Which option is a correct use case for regression in Machine Learning? (variation 73)
29. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
30. When working with Machine Learning, why would a developer use features? (variation 91)
31. Which statement best describes overfitting in Machine Learning? (variation 75)
32. What is the most accurate beginner-level explanation of accuracy? (variation 357)
33. When working with Machine Learning, why would a developer use features? (variation 81)
34. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
35. What is the most accurate beginner-level explanation of accuracy? (variation 107)
36. Which statement best describes overfitting in Machine Learning? (variation 355)

37. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
38. Which option is a correct use case for regression in Machine Learning? (variation 83)
39. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
40. Which option is a correct use case for regression in Machine Learning? (variation 93)
41. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
42. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
43. Which statement best describes training data in Machine Learning?
44. When working with Machine Learning, why would a developer use features? (variation 71)
45. Which option is a correct use case for regression in Machine Learning? (variation 353)
46. What is the most accurate beginner-level explanation of labels? (variation 352)
47. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
48. Which option is a correct use case for regression in Machine Learning?
49. What is the most accurate beginner-level explanation of accuracy? (variation 97)
50. Which option is a correct use case for confusion matrix in Machine Learning?
51. What is the most accurate beginner-level explanation of labels? (variation 72)
52. When working with Machine Learning, why would a developer use features? (variation 101)
53. What is the most accurate beginner-level explanation of labels? (variation 92)
54. When working with Machine Learning, why would a developer use train-test split? (variation 86)
55. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)

56. When working with Machine Learning, why would a developer use features?
57. Which statement best describes overfitting in Machine Learning? (variation 95)
58. When working with Machine Learning, why would a developer use train-test split?
59. When working with Machine Learning, why would a developer use train-test split? (variation 106)
60. What is the most accurate beginner-level explanation of accuracy?
