

IIT-JEE Previous Year Practice 2022 (2022)

Subject: General | Topic: Machine Learning

1. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
2. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
3. What is the most accurate beginner-level explanation of accuracy? (variation 77)
4. When working with Machine Learning, why would a developer use features? (variation 81)
5. Which statement best describes training data in Machine Learning? (variation 90)
6. What is the most accurate beginner-level explanation of labels? (variation 82)
7. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
8. When working with Machine Learning, why would a developer use train-test split? (variation 86)
9. Which statement best describes overfitting in Machine Learning? (variation 95)
10. When working with Machine Learning, why would a developer use features? (variation 101)
11. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
12. When working with Machine Learning, why would a developer use features? (variation 71)
13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
14. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
15. Which option is a correct use case for regression in Machine Learning? (variation 103)
16. When working with Machine Learning, why would a developer use features?
17. Which statement best describes overfitting in Machine Learning? (variation 355)

18. Which statement best describes overfitting in Machine Learning? (variation 105)
19. Which option is a correct use case for regression in Machine Learning? (variation 353)
20. Which option is a correct use case for regression in Machine Learning?
21. What is the most accurate beginner-level explanation of accuracy? (variation 357)
22. When working with Machine Learning, why would a developer use train-test split? (variation 76)
23. What is the most accurate beginner-level explanation of accuracy? (variation 107)
24. When working with Machine Learning, why would a developer use features? (variation 91)
25. Which statement best describes training data in Machine Learning? (variation 350)
26. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
27. What is the most accurate beginner-level explanation of accuracy? (variation 87)
28. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
29. Which statement best describes training data in Machine Learning? (variation 100)
30. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
31. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
32. When working with Machine Learning, why would a developer use train-test split? (variation 96)
33. Which option is a correct use case for regression in Machine Learning? (variation 73)
34. Which option is a correct use case for regression in Machine Learning? (variation 83)
35. When working with Machine Learning, why would a developer use features? (variation 351)
36. Which option is a correct use case for regression in Machine Learning? (variation 93)

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
38. Which statement best describes training data in Machine Learning? (variation 80)
39. What is the most accurate beginner-level explanation of labels?
40. What is the most accurate beginner-level explanation of labels? (variation 102)
41. Which option is a correct use case for confusion matrix in Machine Learning?
42. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
43. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
44. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
45. Which statement best describes overfitting in Machine Learning? (variation 75)
46. A student says 'classification' is not relevant to real projects. What is the best correction?
47. What is the most accurate beginner-level explanation of accuracy?
48. What is the most accurate beginner-level explanation of labels? (variation 72)
49. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
50. What is the most accurate beginner-level explanation of labels? (variation 92)
51. Which statement best describes overfitting in Machine Learning? (variation 85)
52. Which statement best describes training data in Machine Learning?
53. Which statement best describes overfitting in Machine Learning?
54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
55. When working with Machine Learning, why would a developer use train-test split?

56. When working with Machine Learning, why would a developer use train-test split? (variation 356)

57. What is the most accurate beginner-level explanation of labels? (variation 352)

58. What is the most accurate beginner-level explanation of accuracy? (variation 97)

59. When working with Machine Learning, why would a developer use train-test split? (variation 106)

60. Which statement best describes training data in Machine Learning? (variation 70)
