

IIT-JEE Previous Year Practice 2025 (2025)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 356)
2. When working with Machine Learning, why would a developer use features? (variation 351)
3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
4. A student says 'classification' is not relevant to real projects. What is the best correction?
5. When working with Machine Learning, why would a developer use train-test split? (variation 86)
6. What is the most accurate beginner-level explanation of labels? (variation 72)
7. Which statement best describes overfitting in Machine Learning? (variation 355)
8. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
9. When working with Machine Learning, why would a developer use train-test split? (variation 96)
10. Which statement best describes overfitting in Machine Learning? (variation 95)
11. When working with Machine Learning, why would a developer use features? (variation 91)
12. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
13. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
14. What is the most accurate beginner-level explanation of accuracy? (variation 87)
15. Which statement best describes overfitting in Machine Learning? (variation 85)
16. Which option is a correct use case for regression in Machine Learning? (variation 73)
17. Which statement best describes training data in Machine Learning? (variation 100)

18. When working with Machine Learning, why would a developer use train-test split? (variation 106)
19. What is the most accurate beginner-level explanation of accuracy? (variation 107)
20. What is the most accurate beginner-level explanation of accuracy? (variation 97)
21. Which statement best describes training data in Machine Learning? (variation 70)
22. When working with Machine Learning, why would a developer use features? (variation 101)
23. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
24. What is the most accurate beginner-level explanation of labels?
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
26. What is the most accurate beginner-level explanation of accuracy? (variation 357)
27. Which option is a correct use case for regression in Machine Learning? (variation 103)
28. Which statement best describes training data in Machine Learning?
29. What is the most accurate beginner-level explanation of labels? (variation 352)
30. Which option is a correct use case for regression in Machine Learning? (variation 83)
31. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
32. What is the most accurate beginner-level explanation of accuracy?
33. When working with Machine Learning, why would a developer use train-test split? (variation 76)
34. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
35. Which statement best describes overfitting in Machine Learning?
36. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
38. Which option is a correct use case for regression in Machine Learning? (variation 353)
39. Which option is a correct use case for regression in Machine Learning?
40. When working with Machine Learning, why would a developer use features? (variation 81)
41. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
42. Which option is a correct use case for regression in Machine Learning? (variation 93)
43. Which statement best describes training data in Machine Learning? (variation 80)
44. What is the most accurate beginner-level explanation of labels? (variation 82)
45. Which statement best describes training data in Machine Learning? (variation 350)
46. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
47. When working with Machine Learning, why would a developer use train-test split?
48. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
49. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
50. Which statement best describes overfitting in Machine Learning? (variation 105)
51. Which statement best describes overfitting in Machine Learning? (variation 75)
52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
53. What is the most accurate beginner-level explanation of labels? (variation 92)
54. When working with Machine Learning, why would a developer use features?
55. What is the most accurate beginner-level explanation of labels? (variation 102)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)

57. Which option is a correct use case for confusion matrix in Machine Learning?

58. Which statement best describes training data in Machine Learning? (variation 90)

59. What is the most accurate beginner-level explanation of accuracy? (variation 77)

60. When working with Machine Learning, why would a developer use features? (variation 71)
