

NEET Previous Year Practice 2017 (2017)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning? (variation 105)
2. Which statement best describes overfitting in Machine Learning? (variation 75)
3. Which statement best describes training data in Machine Learning? (variation 90)
4. Which statement best describes overfitting in Machine Learning? (variation 95)
5. When working with Machine Learning, why would a developer use features? (variation 81)
6. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
7. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
8. What is the most accurate beginner-level explanation of labels?
9. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
10. What is the most accurate beginner-level explanation of labels? (variation 102)
11. Which option is a correct use case for regression in Machine Learning?
12. What is the most accurate beginner-level explanation of accuracy? (variation 357)
13. What is the most accurate beginner-level explanation of labels? (variation 92)
14. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
15. When working with Machine Learning, why would a developer use train-test split? (variation 96)
16. Which statement best describes training data in Machine Learning? (variation 70)
17. When working with Machine Learning, why would a developer use train-test split? (variation 356)

18. When working with Machine Learning, why would a developer use features? (variation 101)
19. What is the most accurate beginner-level explanation of accuracy? (variation 77)
20. When working with Machine Learning, why would a developer use features? (variation 351)
21. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
22. Which statement best describes training data in Machine Learning? (variation 350)
23. When working with Machine Learning, why would a developer use train-test split? (variation 106)
24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
25. When working with Machine Learning, why would a developer use train-test split?
26. What is the most accurate beginner-level explanation of accuracy? (variation 97)
27. When working with Machine Learning, why would a developer use train-test split? (variation 86)
28. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
29. What is the most accurate beginner-level explanation of labels? (variation 72)
30. What is the most accurate beginner-level explanation of accuracy? (variation 87)
31. Which option is a correct use case for regression in Machine Learning? (variation 103)
32. What is the most accurate beginner-level explanation of accuracy?
33. When working with Machine Learning, why would a developer use features? (variation 71)
34. When working with Machine Learning, why would a developer use features?
35. Which statement best describes overfitting in Machine Learning? (variation 85)
36. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

37. Which statement best describes training data in Machine Learning? (variation 100)
38. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
40. What is the most accurate beginner-level explanation of labels? (variation 352)
41. What is the most accurate beginner-level explanation of accuracy? (variation 107)
42. Which option is a correct use case for regression in Machine Learning? (variation 353)
43. What is the most accurate beginner-level explanation of labels? (variation 82)
44. Which option is a correct use case for regression in Machine Learning? (variation 93)
45. Which option is a correct use case for regression in Machine Learning? (variation 73)
46. Which statement best describes training data in Machine Learning?
47. Which option is a correct use case for confusion matrix in Machine Learning?
48. Which option is a correct use case for regression in Machine Learning? (variation 83)
49. When working with Machine Learning, why would a developer use train-test split? (variation 76)
50. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
51. A student says 'classification' is not relevant to real projects. What is the best correction?
52. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
53. Which statement best describes overfitting in Machine Learning?
54. When working with Machine Learning, why would a developer use features? (variation 91)
55. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

56. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)

57. Which statement best describes overfitting in Machine Learning? (variation 355)

58. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

59. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)

60. Which statement best describes training data in Machine Learning? (variation 80)
