

NEET Previous Year Practice 2018 (2018)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning? (variation 105)
2. Which statement best describes overfitting in Machine Learning? (variation 75)
3. When working with Machine Learning, why would a developer use train-test split? (variation 96)
4. Which option is a correct use case for regression in Machine Learning? (variation 103)
5. When working with Machine Learning, why would a developer use features? (variation 71)
6. When working with Machine Learning, why would a developer use train-test split? (variation 106)
7. What is the most accurate beginner-level explanation of labels? (variation 352)
8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
9. Which option is a correct use case for regression in Machine Learning?
10. Which statement best describes overfitting in Machine Learning? (variation 95)
11. What is the most accurate beginner-level explanation of accuracy? (variation 87)
12. Which statement best describes training data in Machine Learning?
13. A student says 'classification' is not relevant to real projects. What is the best correction?
14. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
15. Which option is a correct use case for regression in Machine Learning? (variation 93)
16. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
17. What is the most accurate beginner-level explanation of accuracy? (variation 97)

18. Which statement best describes training data in Machine Learning? (variation 70)
19. Which statement best describes training data in Machine Learning? (variation 80)
20. What is the most accurate beginner-level explanation of labels? (variation 72)
21. What is the most accurate beginner-level explanation of labels?
22. What is the most accurate beginner-level explanation of labels? (variation 102)
23. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
24. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
25. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
26. Which option is a correct use case for confusion matrix in Machine Learning?
27. Which option is a correct use case for regression in Machine Learning? (variation 73)
28. Which statement best describes overfitting in Machine Learning? (variation 85)
29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
30. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
31. When working with Machine Learning, why would a developer use train-test split? (variation 356)
32. When working with Machine Learning, why would a developer use features? (variation 81)
33. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
34. What is the most accurate beginner-level explanation of accuracy? (variation 357)
35. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
36. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

37. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
38. When working with Machine Learning, why would a developer use features? (variation 91)
39. What is the most accurate beginner-level explanation of labels? (variation 82)
40. When working with Machine Learning, why would a developer use train-test split? (variation 76)
41. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
42. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
43. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
44. Which statement best describes training data in Machine Learning? (variation 100)
45. Which statement best describes training data in Machine Learning? (variation 90)
46. What is the most accurate beginner-level explanation of accuracy? (variation 107)
47. What is the most accurate beginner-level explanation of accuracy? (variation 77)
48. What is the most accurate beginner-level explanation of accuracy?
49. When working with Machine Learning, why would a developer use features?
50. What is the most accurate beginner-level explanation of labels? (variation 92)
51. When working with Machine Learning, why would a developer use features? (variation 351)
52. When working with Machine Learning, why would a developer use features? (variation 101)
53. Which option is a correct use case for regression in Machine Learning? (variation 353)
54. Which statement best describes overfitting in Machine Learning? (variation 355)
55. Which statement best describes training data in Machine Learning? (variation 350)

56. When working with Machine Learning, why would a developer use train-test split?
57. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
58. Which statement best describes overfitting in Machine Learning?
59. When working with Machine Learning, why would a developer use train-test split? (variation 86)
60. Which option is a correct use case for regression in Machine Learning? (variation 83)
