

NEET Previous Year Practice 2020 (2020)

Subject: General | Topic: Machine Learning

1. When working with Machine Learning, why would a developer use train-test split? (variation 76)
2. When working with Machine Learning, why would a developer use features? (variation 101)
3. What is the most accurate beginner-level explanation of accuracy?
4. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
5. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
6. Which option is a correct use case for regression in Machine Learning?
7. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
8. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
9. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
10. What is the most accurate beginner-level explanation of labels?
11. What is the most accurate beginner-level explanation of labels? (variation 92)
12. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
13. When working with Machine Learning, why would a developer use features? (variation 91)
14. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
15. When working with Machine Learning, why would a developer use features? (variation 351)
16. What is the most accurate beginner-level explanation of labels? (variation 82)
17. When working with Machine Learning, why would a developer use features? (variation 81)

18. Which option is a correct use case for regression in Machine Learning? (variation 73)
19. Which statement best describes overfitting in Machine Learning? (variation 85)
20. When working with Machine Learning, why would a developer use train-test split?
21. What is the most accurate beginner-level explanation of accuracy? (variation 77)
22. Which statement best describes training data in Machine Learning? (variation 100)
23. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
24. When working with Machine Learning, why would a developer use train-test split? (variation 106)
25. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
26. Which statement best describes overfitting in Machine Learning? (variation 105)
27. Which option is a correct use case for regression in Machine Learning? (variation 93)
28. Which statement best describes training data in Machine Learning? (variation 80)
29. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
30. When working with Machine Learning, why would a developer use train-test split? (variation 356)
31. Which statement best describes training data in Machine Learning? (variation 350)
32. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
33. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
34. What is the most accurate beginner-level explanation of accuracy? (variation 357)
35. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
36. Which statement best describes training data in Machine Learning? (variation 70)

37. When working with Machine Learning, why would a developer use features? (variation 71)
38. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
39. What is the most accurate beginner-level explanation of labels? (variation 352)
40. Which option is a correct use case for regression in Machine Learning? (variation 83)
41. Which option is a correct use case for regression in Machine Learning? (variation 353)
42. What is the most accurate beginner-level explanation of accuracy? (variation 87)
43. When working with Machine Learning, why would a developer use train-test split? (variation 96)
44. What is the most accurate beginner-level explanation of labels? (variation 72)
45. Which statement best describes overfitting in Machine Learning? (variation 355)
46. Which statement best describes training data in Machine Learning? (variation 90)
47. Which statement best describes overfitting in Machine Learning?
48. When working with Machine Learning, why would a developer use features?
49. Which statement best describes overfitting in Machine Learning? (variation 75)
50. Which option is a correct use case for regression in Machine Learning? (variation 103)
51. What is the most accurate beginner-level explanation of accuracy? (variation 97)
52. A student says 'classification' is not relevant to real projects. What is the best correction?
53. What is the most accurate beginner-level explanation of accuracy? (variation 107)
54. Which option is a correct use case for confusion matrix in Machine Learning?
55. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

56. Which statement best describes training data in Machine Learning?

57. Which statement best describes overfitting in Machine Learning? (variation 95)

58. When working with Machine Learning, why would a developer use train-test split? (variation 86)

59. A student says 'gradient descent' is not relevant to real projects. What is the best correction?

60. What is the most accurate beginner-level explanation of labels? (variation 102)
