

NEET Previous Year Practice 2024 (2024)

Subject: General | Topic: Machine Learning

1. Which statement best describes overfitting in Machine Learning? (variation 95)
2. Which statement best describes overfitting in Machine Learning? (variation 105)
3. Which statement best describes training data in Machine Learning?
4. Which option is a correct use case for regression in Machine Learning?
5. Which option is a correct use case for regression in Machine Learning? (variation 73)
6. What is the most accurate beginner-level explanation of labels? (variation 352)
7. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
8. When working with Machine Learning, why would a developer use features? (variation 91)
9. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
10. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
11. Which statement best describes training data in Machine Learning? (variation 90)
12. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
13. When working with Machine Learning, why would a developer use train-test split? (variation 356)
14. What is the most accurate beginner-level explanation of accuracy? (variation 107)
15. Which option is a correct use case for confusion matrix in Machine Learning?
16. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
17. Which statement best describes overfitting in Machine Learning?

18. Which option is a correct use case for regression in Machine Learning? (variation 83)
19. Which statement best describes overfitting in Machine Learning? (variation 75)
20. When working with Machine Learning, why would a developer use features? (variation 101)
21. Which statement best describes training data in Machine Learning? (variation 80)
22. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
23. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
24. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
25. Which statement best describes training data in Machine Learning? (variation 100)
26. Which statement best describes overfitting in Machine Learning? (variation 85)
27. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
28. What is the most accurate beginner-level explanation of accuracy? (variation 97)
29. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
30. What is the most accurate beginner-level explanation of accuracy? (variation 357)
31. What is the most accurate beginner-level explanation of labels? (variation 92)
32. What is the most accurate beginner-level explanation of accuracy? (variation 87)
33. Which option is a correct use case for regression in Machine Learning? (variation 93)
34. When working with Machine Learning, why would a developer use train-test split? (variation 96)
35. When working with Machine Learning, why would a developer use features? (variation 71)
36. When working with Machine Learning, why would a developer use features? (variation 351)

37. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
38. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
39. A student says 'classification' is not relevant to real projects. What is the best correction?
40. When working with Machine Learning, why would a developer use train-test split? (variation 86)
41. Which statement best describes training data in Machine Learning? (variation 70)
42. What is the most accurate beginner-level explanation of accuracy?
43. Which statement best describes overfitting in Machine Learning? (variation 355)
44. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
45. When working with Machine Learning, why would a developer use train-test split?
46. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
47. What is the most accurate beginner-level explanation of accuracy? (variation 77)
48. What is the most accurate beginner-level explanation of labels? (variation 102)
49. What is the most accurate beginner-level explanation of labels? (variation 82)
50. Which option is a correct use case for regression in Machine Learning? (variation 103)
51. What is the most accurate beginner-level explanation of labels?
52. When working with Machine Learning, why would a developer use features?
53. Which statement best describes training data in Machine Learning? (variation 350)
54. When working with Machine Learning, why would a developer use train-test split? (variation 106)
55. What is the most accurate beginner-level explanation of labels? (variation 72)

56. Which option is a correct use case for regression in Machine Learning? (variation 353)

57. When working with Machine Learning, why would a developer use features? (variation 81)

58. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)

59. When working with Machine Learning, why would a developer use train-test split? (variation 76)

60. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
