

NEET Previous Year Practice 2025 (2025)

Subject: General | Topic: Machine Learning

1. Which statement best describes training data in Machine Learning? (variation 350)
2. What is the most accurate beginner-level explanation of accuracy? (variation 107)
3. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
4. A student says 'classification' is not relevant to real projects. What is the best correction?
5. Which statement best describes overfitting in Machine Learning? (variation 105)
6. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
7. Which option is a correct use case for regression in Machine Learning?
8. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
9. When working with Machine Learning, why would a developer use train-test split? (variation 86)
10. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
11. What is the most accurate beginner-level explanation of accuracy? (variation 97)
12. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
13. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
14. When working with Machine Learning, why would a developer use features? (variation 81)
15. What is the most accurate beginner-level explanation of labels? (variation 102)
16. What is the most accurate beginner-level explanation of labels? (variation 82)
17. What is the most accurate beginner-level explanation of accuracy? (variation 77)

18. Which statement best describes overfitting in Machine Learning? (variation 85)
19. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
20. What is the most accurate beginner-level explanation of accuracy? (variation 357)
21. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
22. When working with Machine Learning, why would a developer use features? (variation 91)
23. Which statement best describes training data in Machine Learning? (variation 80)
24. Which statement best describes overfitting in Machine Learning?
25. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
26. Which option is a correct use case for regression in Machine Learning? (variation 73)
27. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
28. Which statement best describes training data in Machine Learning? (variation 100)
29. Which option is a correct use case for confusion matrix in Machine Learning?
30. Which statement best describes training data in Machine Learning? (variation 70)
31. What is the most accurate beginner-level explanation of labels? (variation 352)
32. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
33. When working with Machine Learning, why would a developer use train-test split? (variation 76)
34. When working with Machine Learning, why would a developer use train-test split? (variation 356)
35. When working with Machine Learning, why would a developer use features? (variation 71)
36. What is the most accurate beginner-level explanation of accuracy? (variation 87)

37. When working with Machine Learning, why would a developer use features? (variation 351)
38. Which statement best describes overfitting in Machine Learning? (variation 95)
39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
40. When working with Machine Learning, why would a developer use train-test split?
41. Which statement best describes overfitting in Machine Learning? (variation 75)
42. What is the most accurate beginner-level explanation of accuracy?
43. When working with Machine Learning, why would a developer use train-test split? (variation 106)
44. Which option is a correct use case for regression in Machine Learning? (variation 103)
45. What is the most accurate beginner-level explanation of labels? (variation 72)
46. Which option is a correct use case for regression in Machine Learning? (variation 353)
47. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
48. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
49. Which option is a correct use case for regression in Machine Learning? (variation 93)
50. Which statement best describes training data in Machine Learning? (variation 90)
51. When working with Machine Learning, why would a developer use features? (variation 101)
52. Which statement best describes training data in Machine Learning?
53. What is the most accurate beginner-level explanation of labels?
54. What is the most accurate beginner-level explanation of labels? (variation 92)
55. When working with Machine Learning, why would a developer use features?

56. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)

57. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

58. Which statement best describes overfitting in Machine Learning? (variation 355)

59. When working with Machine Learning, why would a developer use train-test split? (variation 96)

60. Which option is a correct use case for regression in Machine Learning? (variation 83)
