

NEET Previous Year Practice 2026 (2026)

Subject: General | Topic: Machine Learning

1. What is the most accurate beginner-level explanation of labels?
2. What is the most accurate beginner-level explanation of accuracy? (variation 107)
3. What is the most accurate beginner-level explanation of accuracy? (variation 357)
4. When working with Machine Learning, why would a developer use train-test split? (variation 76)
5. Which option is a correct use case for regression in Machine Learning? (variation 93)
6. When working with Machine Learning, why would a developer use features? (variation 91)
7. Which statement best describes overfitting in Machine Learning?
8. When working with Machine Learning, why would a developer use train-test split?
9. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
10. Which statement best describes training data in Machine Learning? (variation 80)
11. When working with Machine Learning, why would a developer use features? (variation 101)
12. When working with Machine Learning, why would a developer use train-test split? (variation 86)
13. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)
14. Which statement best describes training data in Machine Learning? (variation 70)
15. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
16. What is the most accurate beginner-level explanation of labels? (variation 82)
17. Which statement best describes overfitting in Machine Learning? (variation 95)

18. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
19. What is the most accurate beginner-level explanation of labels? (variation 92)
20. What is the most accurate beginner-level explanation of accuracy? (variation 97)
21. Which statement best describes training data in Machine Learning? (variation 350)
22. Which option is a correct use case for regression in Machine Learning? (variation 83)
23. What is the most accurate beginner-level explanation of labels? (variation 352)
24. When working with Machine Learning, why would a developer use train-test split? (variation 96)
25. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
26. Which statement best describes training data in Machine Learning?
27. When working with Machine Learning, why would a developer use features?
28. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)
29. Which option is a correct use case for regression in Machine Learning?
30. Which statement best describes overfitting in Machine Learning? (variation 105)
31. Which option is a correct use case for regression in Machine Learning? (variation 353)
32. When working with Machine Learning, why would a developer use features? (variation 71)
33. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
34. Which statement best describes training data in Machine Learning? (variation 100)
35. What is the most accurate beginner-level explanation of labels? (variation 102)
36. Which statement best describes overfitting in Machine Learning? (variation 85)

37. When working with Machine Learning, why would a developer use features? (variation 81)
38. When working with Machine Learning, why would a developer use train-test split? (variation 106)
39. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
40. A student says 'classification' is not relevant to real projects. What is the best correction?
41. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
42. What is the most accurate beginner-level explanation of accuracy?
43. Which statement best describes overfitting in Machine Learning? (variation 75)
44. When working with Machine Learning, why would a developer use features? (variation 351)
45. When working with Machine Learning, why would a developer use train-test split? (variation 356)
46. Which option is a correct use case for regression in Machine Learning? (variation 73)
47. What is the most accurate beginner-level explanation of labels? (variation 72)
48. Which statement best describes training data in Machine Learning? (variation 90)
49. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
50. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
51. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
52. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
53. Which option is a correct use case for regression in Machine Learning? (variation 103)
54. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
55. What is the most accurate beginner-level explanation of accuracy? (variation 87)

56. Which statement best describes overfitting in Machine Learning? (variation 355)

57. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)

58. Which option is a correct use case for confusion matrix in Machine Learning?

59. What is the most accurate beginner-level explanation of accuracy? (variation 77)

60. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
