

UPSC Previous Year Practice 2019 (2019)

Subject: General | Topic: Machine Learning

1. Which statement best describes training data in Machine Learning?
2. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 84)
3. Which statement best describes training data in Machine Learning? (variation 350)
4. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 104)
5. Which option is a correct use case for confusion matrix in Machine Learning? (variation 108)
6. Which option is a correct use case for regression in Machine Learning? (variation 83)
7. What is the most accurate beginner-level explanation of accuracy? (variation 107)
8. Which option is a correct use case for confusion matrix in Machine Learning? (variation 88)
9. Which statement best describes overfitting in Machine Learning? (variation 105)
10. What is the most accurate beginner-level explanation of labels?
11. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 354)
12. What is the most accurate beginner-level explanation of labels? (variation 72)
13. Which option is a correct use case for regression in Machine Learning? (variation 93)
14. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 359)
15. When working with Machine Learning, why would a developer use features? (variation 71)
16. Which statement best describes training data in Machine Learning? (variation 80)
17. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 99)

18. What is the most accurate beginner-level explanation of accuracy? (variation 77)
19. What is the most accurate beginner-level explanation of labels? (variation 352)
20. When working with Machine Learning, why would a developer use features?
21. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 94)
22. When working with Machine Learning, why would a developer use train-test split?
23. When working with Machine Learning, why would a developer use features? (variation 91)
24. A student says 'classification' is not relevant to real projects. What is the best correction?
25. Which statement best describes training data in Machine Learning? (variation 90)
26. Which option is a correct use case for confusion matrix in Machine Learning? (variation 358)
27. Which option is a correct use case for regression in Machine Learning?
28. What is the most accurate beginner-level explanation of labels? (variation 82)
29. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 109)
30. When working with Machine Learning, why would a developer use features? (variation 81)
31. Which statement best describes overfitting in Machine Learning? (variation 75)
32. A student says 'classification' is not relevant to real projects. What is the best correction? (variation 74)
33. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 89)
34. What is the most accurate beginner-level explanation of accuracy? (variation 97)
35. Which option is a correct use case for regression in Machine Learning? (variation 103)
36. Which statement best describes overfitting in Machine Learning? (variation 95)

37. Which statement best describes training data in Machine Learning? (variation 100)
38. When working with Machine Learning, why would a developer use train-test split? (variation 86)
39. A student says 'gradient descent' is not relevant to real projects. What is the best correction?
40. Which option is a correct use case for confusion matrix in Machine Learning?
41. What is the most accurate beginner-level explanation of accuracy? (variation 357)
42. When working with Machine Learning, why would a developer use features? (variation 101)
43. Which option is a correct use case for regression in Machine Learning? (variation 353)
44. Which option is a correct use case for regression in Machine Learning? (variation 73)
45. What is the most accurate beginner-level explanation of labels? (variation 92)
46. Which option is a correct use case for confusion matrix in Machine Learning? (variation 98)
47. What is the most accurate beginner-level explanation of labels? (variation 102)
48. When working with Machine Learning, why would a developer use features? (variation 351)
49. Which statement best describes overfitting in Machine Learning?
50. When working with Machine Learning, why would a developer use train-test split? (variation 106)
51. When working with Machine Learning, why would a developer use train-test split? (variation 356)
52. Which statement best describes overfitting in Machine Learning? (variation 85)
53. Which statement best describes overfitting in Machine Learning? (variation 355)
54. A student says 'gradient descent' is not relevant to real projects. What is the best correction? (variation 79)
55. What is the most accurate beginner-level explanation of accuracy? (variation 87)

56. Which option is a correct use case for confusion matrix in Machine Learning? (variation 78)

57. Which statement best describes training data in Machine Learning? (variation 70)

58. What is the most accurate beginner-level explanation of accuracy?

59. When working with Machine Learning, why would a developer use train-test split? (variation 76)

60. When working with Machine Learning, why would a developer use train-test split? (variation 96)
